I am a 46-year-old female, mother of two young girls ages 10 and 11. We live in Florida where the law regulates telecommunication providers use of public rights-of-way (ROW); Florida Statue Section 337.401. Because of this law, Crown Castle, now acquired by Zayo Group Holdings, was given permission by the City of Hollywood, Florida to place a 5G small cell pole in the right of way of my property, placing it 32 feet from my bedroom window. We were given no notice, and we were met with resistance when we fought to have the project stopped and/or relocated. We begged and pleaded with the City of Hollywood during the installation process, and they hid behind the statute claiming their hands were tied. Crown Castle dismissed us completely and in late September 2025, the pole was activated but our family was not informed of its activation. I began to feel ill around this time and kept telling my husband I knew the pole was operational, however, we had no confirmation of this. My symptoms started with a headache which led to severe pain at the base of my skull. Extreme nausea, ringing of the ears, trembling hands, and insomnia followed. On October 13th 2025, I picked my daughters up from school and they both complained of headaches. That same day I got them in to see their pediatrician. I explained our living situation involving the 5G pole and discussed my theory of our new onset symptoms. The pediatrician advised we should monitor my daughters before doing any diagnostic testing and I agreed. Over a short period of time our symptoms became worse, and we ultimately confirmed the pole had been activated. I immediately purchased Faraday curtains for each bedroom and a meter to read the RF levels. Once the curtains were hung, I expected to see a huge difference in the RF readings but there wasn't. I called Faraday Defense and they instructed me to do a test; place a curtain directly over my body like a tent and perform a meter reading. I did this and the meter went to zero. The representative for Faraday advised that due to this result, the curtains were not defective, and in essence the RF signal in my home was too strong for just hanging the curtains alone. Based on this information I decided to pitch a camping tent in my living room. I covered the entire surface with the Faraday curtains, and we began living inside the tent. We would limit our time at home; picking the girls up from school after work and either spending the rest of the evening at a park or the library. We would only go home to bathe and sleep in the tent until we left for work and school the next morning. I also purchased RF blocking blankets and hats for the family. We lived inside our makeshift Faraday cage for 50 days. As our symptoms continued to get worse I could no longer risk keeping my children in this situation. On December 6th 2025, we moved into a one-bedroom, one-bathroom apartment on the opposite side of the county. I cannot return to my home of 23 years because I immediately become sick when I'm there. The symptoms subside when I leave. This is cause and effect! My family and I were healthy and had no medical problems prior to the 5G pole's activation beside our home. We possess medical records documenting the new onset health issues and the subsequent diagnostic testing we received due to this including EEG's, MRI's,

bloodwork, and follow-up care from a neurologist. These records clearly indicate the symptoms are related to radiofrequency exposure and are coded as such. Now, September 21, 2026, my family is still displaced from our home due to the shameful placement of this equipment. We are not fighting against technology or progress. There must be a safe, responsible way to deploy this infrastructure. Placing intrusive industrial, harmful technology directly on top of people in residential neighborhoods is not acceptable. We are asking for smart planning, proper zoning, and respect for families and their homes. We want to go home. MOVE THE POLE!
