Dear Sir/Madam,

Unfortunately I get strange migraines and ear ringing. The symptoms feel externally induced, sharp pains in the ears and deep in the head. Constant tinnitus and penetrating headaches. The ear pressure feels as if someone is pressing a button at certain times and is causing pain in my inner ear. At the same time it feels like a wave of radiation slowly or sometimes sharply poking around my brain, and heart. I also have symptoms of nausea and vertigo as if I am immersed constantly in a magnetic field. Other symptoms include sharp pinching like needles on the toes and fingers and pain on the joints and heart. The symptoms are daily, and even have a frequency of many times every minute. I should apologize for asking you these details. I should admit that I have been many times during the past two months at the medical centre, and undergone an MRI scan. The doctors are perplexed, and they think that my suspicions have no grounds at all and instead there are psychiatric factors which are causing me these constant pains in the head and body. And all this ordeal stops me from having a normal life. I would kindly ask your opinion and comments concerning the possibility of an external effect by local microwave emissions for my symptoms. How can I detect if there is an external source causing me these headaches? the ear ringing is unbelievable. I should admit that I get these symptoms even when I am walking outside, shopping, in a department store hidden in aisles and undergound, driving or traveling by train at a high speed. Lately, since December 2026 I also have symptoms of voice to skull subliminal messages. The messages are mentioning the word suicide, age, and farmer. They are torturing my brain with microwaves that cause ear ringing and at the same time they send subliminal messagesto my brain urging me to commit suicide. They also shake my head violently by using microwave radiation. It is the so called RNM/V2K/DEW torture. Thank you for any possible suggestion and a face to face meeting.

Kind regards,

Georgios Kokolakis
