5/20/14

To Whomit May Concern,

I've been a licensed private investigator under the State of Missouri's licensure statutes since they became enacted in 2010. Prior to that I was licensed as a private investigator since 2006 by my municipality, Columbia, Missouri. I had also worked as a P.I. under a company license in the 1990's, and worked related, adjacent industries in other years while obtaining a Bachelors Degree in the Administration of Justice from the University of Missouri in Kansas City, with Honors. I was also awarded the Edward Tomich Memorial Award.

In regard to Kristi Dorschmidt, I state under penalty of perjury, that I performed a SCADA evaluation of her and her environment in her home on 5/19/14. Ms. Dorschmidt tested positive for abnormal levels of EMF (Electro Magnetic Frequency) emitting from her body. In addition, portions of Ms. Dorschmidt's home also tested abnormal + high for levels of EMF, both in her kitchen and living room areas and several purchased food products. Since EMF levels do not naturally occur at high levels in food products, inanimate non-electronic objects, or healthy humans — This may lead one to believe that some sort of tampering has occurred to cause the higher EMF levels.

Two pages follow with my notes from the date of SCADA evaluation and a body map of EMF levels of Ms. Dorschmidt.

Finally, it should also be noted that my work in Arizona has been supervised by Arizona licensed private detective Denise (formerly Ross) Williamee, and that I am also a CESCO (Certified Environmental Safety Compliance Officer) in NREP (National Registry of Environmental Professionals) and SCADA Professional (having co-authored the NREP SCADA Certification Study Guide). The above is true and accurate.
