- **Objective:** Employ standard 5G capabilities to provide a scalable, interoperable, and resilient warfighting network for NATO
- **FutureG / 5G Relevance:** Leverages capabilities that enable 5G secure roaming, RAN Sharing, and internetworking between a 5G core and a heterogeneous group of tactical radios to position NATO as a 5G service provider
- **Warfighter Impact:**
  - **Scalability**—Use host nation RAN Sharing with a NATO 5G core and secure roaming to maximize coverage and rapidly achieve shared situational awareness
  - **Interoperability**—Supports information exchange among NATO allies using their organic tactical radios and commercial 5G mobile devices
  - **Resilient Communications**—Provides the warfighter with options to employ the best waveform(s) (tactical, 5G, or both) for each phase of the mission

5G ENERGY WEAPON TECHNOLOGY EXPLAINED

Nov 15, 2019 | 5G Watch, REAL SPEAKS

In this episode, hosts Tivon and Hope explain 5G technology, how it works and how it is related to directed energy weapons. Links are made between microwave technology and the current assault on the population that is resulting in sickness, death, and fires just to name a few of the dangers. Covered in this Episode: Microwave Warfare, Energy Weapons, Voice to Skull Technology, RFID chips, fractal antennaes, 5G satellites in space, smart dust, Hutchinson effect and more.

1939–1945 – Psychiatry as a Tool of Nazi Selection
Medicine in the service of genocide
During World War II, psychiatry in Nazi Germany became a core instrument of racial and social "cleansing." Doctors and scientists took part in the "T-4" euthanasia program, executing people with mental and developmental conditions as "unfit" or "inferior."
Scientific language around heredity and degeneration was used to justify mass murder. Psychiatry turned punitive, and psychiatric hospitals became killing centers.
Patients were condemned not by symptoms but by ideology. This was not just a crime — it was a systemic experiment on the very idea of personhood, designed to erase anyone who didn't fit the ideal.
The doctor became the executioner. The diagnosis — a death sentence.
Psychiatry lost its humanity and became a mechanism of exiermination,

5G позволяют использовать частоты миллиметрового диапазона – опасность этих частот от 30 до 120 ГГц в том, что эти диапазоны оказывают крайне негативное влияние на организм человека.

Человек является большой электрической машиной. Все функции организма управляются головным мозгом. Головной мозг генерирует электромагнитные импульсы, которые посредством центральной нервной периферической системы доставляются до каждого органа, до каждой клетки и таким образом происходит управление всеми функциями организма.

Если внешнее воздействие будет воздействовать извне на организм человека, превышая определенные пределы – это будет вызывать помехи в управляющем воздействии, которое проходит от головного мозга по всем клеткам организма и соответственно организм будет давать сбой.

Миллиметровые волны создают опасность и воздействуют на метаболизм самих клеток

Когда атомы водорода принимают вот эту внешнюю электромагнитную энергию, то под воздействием этой внешне подведенной энергии, эти атомы водорода выходят из своего устойчивого состояния –начинают колебаться.

Ткань поглощает электромагнитную энергию - выходят атомы водорода из стабильного состояния (начинают колебаться с большой скоростью), в результате этих колебаний происходит внутренний разогрев вещества, соответственно рвутся межатомные и межмолекулярные связи – нарушается структура самого вещества, живой ткани, что становится причиной возникновения болезней и нарушений в работе и функциях систем организма человека.

Вид высокочастотного излучения позволяет создавать инфаркты, инсульты, сгущение крови, слипание лейкоцитов, тромбозы. Также возможно оказывать воздействие на центральную нервную систему, репродуктивную функцию, что может вызвать бесплодие.

5G использует активные фазированные антенные решетки, которые позволяют фокусировать направленные электромагнитные лучи миллиметрового диапазона.

Высокочастотное электромагнитное излучение способно оказывать энергоинформационное воздействие, которые способны вызывать те или иные нарушения функционирования организма человека.

Техногенное воздействие снижает иммунитет и активирует болезни.

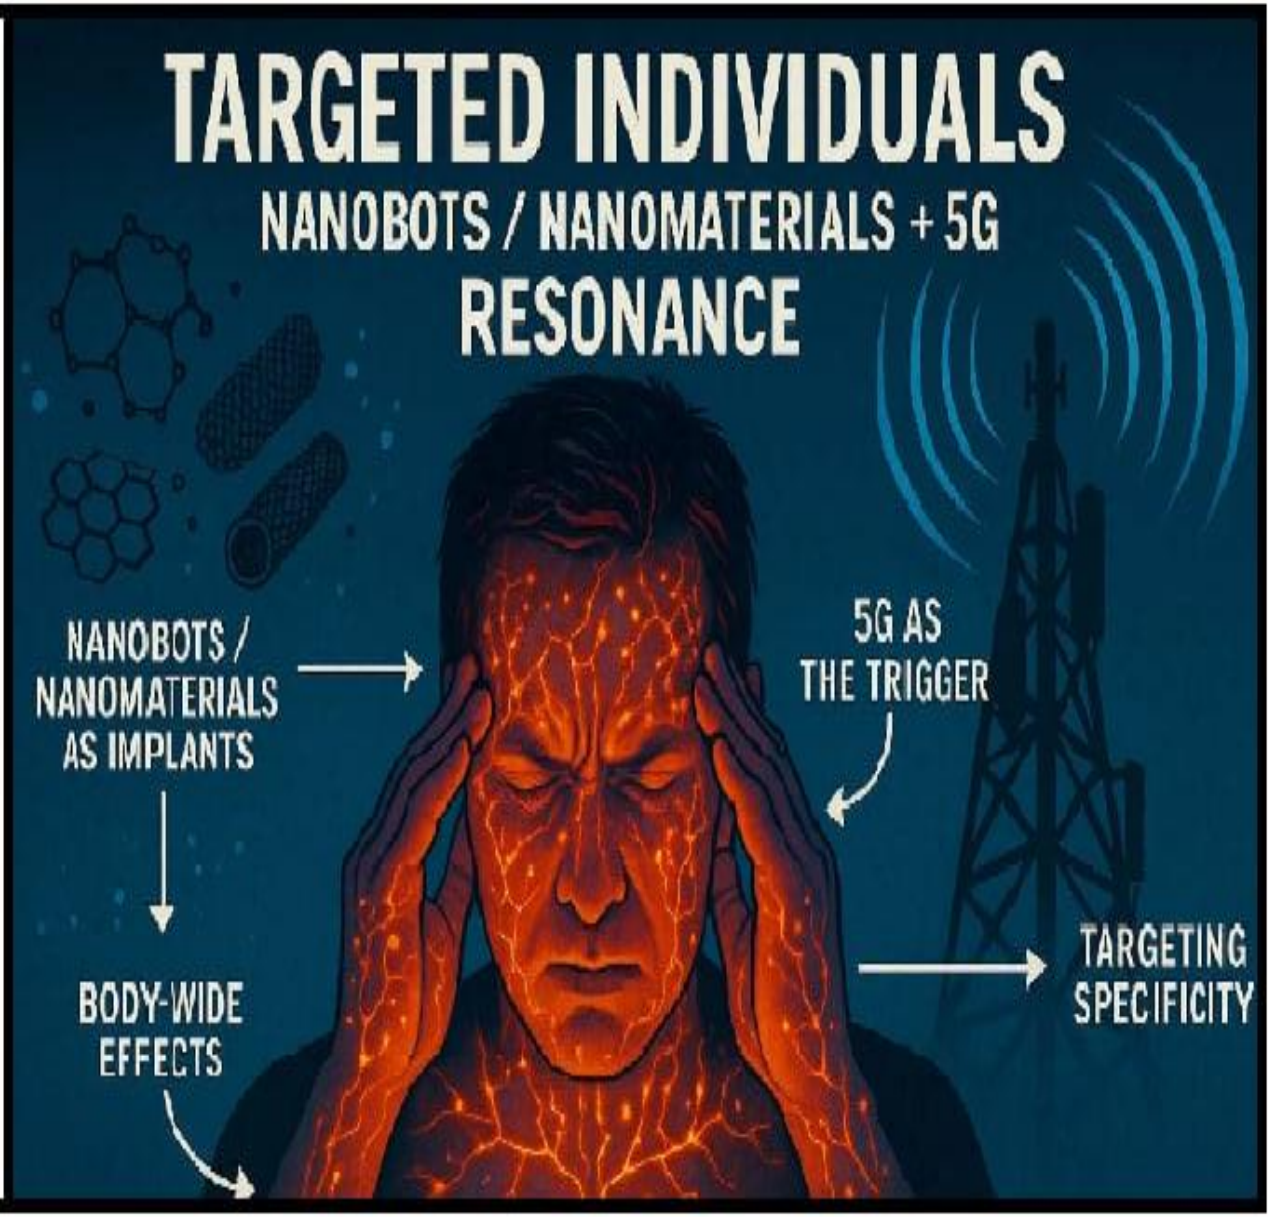

Smart dust – микроэлектронные устройства размером 0,06 *$10^{-6}$ мм. Микроструктуры, микропроцессорные устройства способные обрабатывать информацию, а также способны оказывать определенное воздействие на ту среду в которой они находятся т.е. оказывать управляющее воздействие – отправлять информацию и получать внешнее управляющее воздействие из внешней среды. Переносчиком этой информации являются электромагнитные волны.

5G предназначены для того, чтобы эти микроэлектронные структуры работали (интернет вещей).

5G является тем устройством, которое активирует и обеспечивает устойчивую связь обмена информации.

Микродатчики проникают через мембрану живой клетки и попадают во внутриклеточную жидкость. Их размеры позволяют находиться внутри клетки и накапливаться там и ждать своего часа, команды пока по внешнему сигналу, по внешнему воздействию они будут активированы. Таким образом, будет запущен процесс создания внутри живого организма целой сети сбора информации и внешнего воздействия и передачи.

С помощью внешнего воздействия, с помощью сетей 5G возможно передавать управляющее воздействие на эти устройства. Они будут их транслировать через нейронную систему и управлять, контролировать по сути функциями организма.

# DoD 5G Context

- **5G is transformational**
  - Not just new radios and cell phones
  - "Ubiquitous connectivity": human-to-human, machine-to-machine, human-to-machine
- **Critical for DoD use, but – there is no such thing as a secure system**
  - DoD must use networks in which we have "zero trust"
  - Must operate through adversary impediments

⇩

- **DoD must partner with industry to understand and influence 5G**
  - Fully utilize the advantages
  - Mitigate and work with the vulnerabilities
  - Collaborative experimentation to leverage the > $350B industry investment in the U.S. over the next 5 years
