I am submitting this comment in response to HHS's Request for Information on Electromagnetic Fields (EMFs), Radiofrequency (RF) Radiation, and Wireless Radiation Exposure.

I am responding from the perspective of an individual afflicted by the various forms of wireless radiation and a concerned member of the public.

Since being forced, about 6 months ago and under duress, to allow my local power company to replace my analog meter to a digital "Smart" meter, I've begun to experience a myriad of health issues in myself & my 2 animals involving, what I suspect to be the negative effects of the RF radiation caused by the constant RF activity running through my appliances & my home for the purpose of "monitoring" my usage.

(1) I now have a constant & annoying "tremor" in my body that does not subside and was not present when I had my analog meter.

(2) I now suffer more headaches in the last 6 months since the installation of the Smart meter than I've had in the last 2 decades.

(3) Prior to the SM installation, my health was exceptional for my age (68). Now my body just feels more worn down and I become fatigued my sooner in the day than previously.

(4) Not but about a month after the SM installation, the health of both of my cats began to rapidly deteriorate despite their vitality and excellent health before the change-out of the meter. Within a short They became increasingly fatigued every day just as I was.

(5) One of my beloved companions has just passed away, not quite a month ago, and the other one's health is quickly deteriorating, as well. I'm at a loss to do anything for her since I have NO control over this nefarious & heinous device that has been forced on me without choice!

I am, absolutely, convinced all of these negative health issues, in myself and my animals, are the result of all the RF radiation that has been introduced into my home through a variety of devices, to include my cell phone, internet router, Smart meter and all other wireless electrical devices that feed into the Smart meter.

I support HHS taking an active role in examining the potential health and environmental effects of wireless radiation. Questions about human health should be addressed by federal agencies with appropriate expertise in medicine, biology, epidemiology, and public health, and the experiences of individuals and families who report being affected should be considered alongside the scientific evidence.

I urge HHS to carefully evaluate these experiences and the scientific evidence, identify gaps in current research, give particular attention to children and other potentially vulnerable populations, and establish appropriate federal research priorities regarding wireless radiation and public health.

Thank you for providing individuals and families with an opportunity to be heard.
