City Council EMF.RF Done

To the Members of City Council:

I am writing to formally raise concerns regarding the possible use of electromagnetic-frequency (EMF/RF) technologies in ways that could affect civilians without their knowledge, consent, or an appropriate legal and public-safety framework.

I recognize that radio-frequency and electromagnetic technologies have many legitimate civilian uses, including telecommunications, wireless networks, public safety communications, and other infrastructure. My concern is specifically whether any equipment, systems, or technologies operating within the city could be used to monitor, influence, expose, or otherwise affect individuals in ways that have not been publicly disclosed or appropriately authorized.

I began this journey with having my smart meter removed as I thought this was the cause of my vibration feeling I was having in my spine. It was not. I then purchased an EMF/RF meter because my health is being directly affected from what I believe to be from long term exposure to these extreme frequencies which are entering in my home at many entry points on all sides of my home and now the vibration feeling is affecting my entire body along with other new health issues not only affecting me but also my fiancé and my dog.

AEP had came several times to check their equipment, said everything was fine and that we needed to get our home checked by an electrician so we did. We hired a professional electrician to inspect our home and our home electrical system is very good. A few months later, AEP came and changed their equipment throughout the park from what I heard was faulty. However, the vibrations still continue.

Our neighboring individuals have also had health issues I believe related to long term exposure. One neighbor got cancer and had his leg amputated. On the other side of my home, a woman died about 8 months ago in her home and her boyfriend who still lives there had a stroke about a month ago. Both in their 30's. All of the incidents along with my health problems could and seem to be related to EMF/RF exposure. I now believe that my mother who passed away from EMF/RF frequency exposure in 2023 because she was more susceptible, and I was not yet aware of what was happening nor was I sensitive to the frequencies as I had not yet been exposed long-term. I have done much research on the health effects of long-term exposure which I can provide. All of which are happening.

I respectfully request that the City Council consider the following questions:
