City Council EMF.RF Done

I respectfully request that the City Council consider the following questions:

- Does the city own, operate, lease, authorize, or facilitate any equipment capable of intentionally transmitting RF/EMF energy toward members of the public beyond ordinary telecommunications and public-safety functions?
- Are any city departments or contractors using technologies capable of directed or concentrated RF energy in public spaces?
- What policies, oversight procedures, permits, contracts, and legal authorities govern the acquisition and use of such equipment?
- What safeguards exist to prevent unauthorized surveillance, targeting, interference, or exposure of civilians?
- Are independent measurements of RF/EMF levels conducted around relevant city facilities or equipment, and are those measurements publicly available?
- What procedures exist for residents who believe they have been exposed to unusual RF/EMF activity or affected by electronic equipment?
- Has the city received complaints concerning unusual RF/EMF exposure, electronic interference, or suspected directed-energy activity? If so, how are such complaints documented and investigated?
- Are federal, state, or local agencies involved in any RF/EMF-related activities within city limits that residents should be aware of?

I am not asking the Council to assume that any particular allegation is true. I am asking for transparency, independent verification, and appropriate oversight where technologies could potentially affect members of the public.

If no such technology or activity exists, I would appreciate a clear statement identifying the relevant equipment, agencies, policies, and available measurements so residents can better understand the situation. If such technology is being used, I believe residents should have access to information regarding its purpose, operating parameters, legal authority, safety standards, and oversight.

Please consider referring these questions to the appropriate city department, public-safety authority, or independent technical expert and making the response available to the public.

I have contacted many local, state and federal agencies to find resolution on this matter. Our local fire department, health department and police deptartment did not have individuals knowledgeable of the EMF/RF radiation.

Thank you for your attention to this matter and for your commitment to transparency, public safety, and accountable use of technology.
