9/29/2026
Me and my fiancée have lived at our current residence for 5 years. We have had symptoms of EMF/RF radiation that continues to get worse. As stated in the city council emf/rf document, I have had severly interrupted sleep since 2024 waking up with a vibration in my spine which is not a vibration throughout my body including my head which is causing pain. My EMF/RF meter is detecting high levels all over my body and throughout the house. I also have pretty severe tinnitus. I have reported all of my symptoms with my PCP on several occasions. I went to the ER approx. a week ago and reported I was there for radiation poisoning. When I was triaged, my systolic BP was 204 which according to the American Heart Assc is hypertensive emergency. I sat in the ER waiting room for about an hour or more and left because I was not getting any treatment.
My fiancée is having frequent episodes of A-fib and his heart rate is dropping to dangerous levels when sleeping.
We both are having daily headaches, dry sinus, diarrhea everyday, occasional vomiting, dizziness, memory (brain) fog, fatigue, itching and I am also having a very severe vibration sensation everyday throughout my body so severe that it is waking me up every night or in the day when trying to rest. It is so severe that I have to leave my home in the wee early hours of the mornings to stop the vibration. My bloodwork over the past year also shows my red blood cell count declining.
Even our dog itches all day, every day.
