I am writing to formally express my concern regarding the cell tower located in our residential neighborhood, site 1215 Eagle hill Rd. The istallation of these antennas, Oct/2024 and Aug 2026, were placed without notice or communication to residents. I have experienced persistent vibrations and low-frequency rumbling, out side and inside my home. These disturbances are not only very disruptive to daily life but also raise serious concerns about potential structural impacts and health implications. The lack of transparency surrounding the installation process has left residents without critical information about the tower's specifications, operational schedule, or safety measures. I respectfully request the following:

1. Immediate investigation into the source of the vibrations and rumbling, including on-site measurements including local adjacent lots and parcels.
