I am a health practitioner, I'm a massage and bodywork therapist in practice for over 22 years, I am a Mother. I am also a Nationally Certified Massage Therapy Educator. I am 52 yrs. old. I am sending you my doctor note saying I need to avoid wifi. I do not use a cellphone. You already know this but we all have a WIFI DRONE ISSUE. All the neighbors are encroaching on our property, & military flying thermal radiation drones & pressing them in my windows each night playing war games and harassing us on my 16 acres, I moved 5 times, I sold my first home because of this and rented 3 homes which all had the same thing happening. I rented a beautiful mansion in Connecticut and found out it had a smartmeter and it caused me insomnia so the last few weeks before I moved out I slept well in my car away from the house with no radiation or wifi. Living with a smartmeter was hell, I had all the symptoms imaginable, pain in my ear, dizziness, losing balance, but insomnia was the worst. I would turn the circuitbreaker off at night when we sleep. That helped a little bit but didn't help a lot because the smartmeter radiation was always on and radiated DE-dirty electricity through the wires and metal pipes, we avoided sleeping on metal springs and slept on all foam non-metal mattresses. We felt better after leaving, moving out. We moved back to North Carolina where they allow smartmeter opt-outs, so we had no more smartmeter symptoms. I am an EHS Refugee.

You need to change the law so everything has identification, ids, we need identifications on drones no matter how small or big, and mandated laws and standards enforced. Wifi radiation is inconvenient and encroaching on our personal space and property giving our bodies symptoms. I am trying to find a home to settle down in but I need to be miles away from celltowers and I am having a hard time avoiding the celltowers that are on the map close to each property and they should minimize celltowers so it minimizes the struggle.

I should not be forced to use a cellphone, smartphone for using any social media or website, buying food, or work, or anything, we believe in freedom of choice. I took photos of my cat getting cancer from the RFs, the radiation from a smartmeter, she had a wound that the vet said is probably cancer but when we moved away from the smartmeter radiation, her wound got smaller. Our lives have changed since wifi radiation over powered our lives. where we are EHS Refugees where we have to avoid wifi radiation. I have a husband and friends and massage clients who are okay with not bringing wifi in to my home, they have to keep their wifi away from me when near me. We avoid places with celltowers on the buildings or near the buildings. We avoid using LED lights at home, only use incandescent because we get headaches & symptoms. LED lights cause blindness in rats, & people, bring back quality incandescent lights, give us healthy options, not healthy for the environment, healthy for our system, our bodies first before environment.

RFs, & EMFs cause symptoms of insomnia, rage, mass shootings, anxiety, numbness, nerve issues, tremors, convulsions, reflex issues, inflammation, pain, brain fog, personality disorders, addiction, ADD, disruption of REM & sleep, most of all insomnia & sleep disorders which I believe are the source of all our problems. Tell them to do sleep studies. I am a sleep expert. You need to lower levels of radiation, you need to have standards like Europe and or think about

people, plants & animal health. It messes up migration, the bees, it shortens lifespan. They need to have the battery removable so when the cellphone is off it is really off, not on 24-7. They need to make these adjustments to protect our health. They need to focus on "rest" & "sleep" & these basic needs for health & what that really means & how wifi, RF & EMF is interfering with our bodies, our bodies are electric, delicate, sensitive more than they know or care, & it is damaging our cells. It is causing inflammation. It is causing dehydration, & lowering vit. D levels dangerously. I do not use wifi, that is why. I see massage therapy clients complaining of mysterious pain and I think it is most caused by RFs, Radiation Frequencies. I always suggest to clients if they have to have wifi in their home, at least turn it off at night time, so it is not on 24-7, do not keep their cellphone in their pocket, keep it in a backpack or briefcase away from their body, when they sleep, sleep with no chargers or wifi next to them in the sleep room, turn it off and place in the mailbox at the end of the driveway, and or place it in a faraday cage wrapped in aluminum foil. I see lots of massage therapy clients that complain of pain in the same spot they keep their cellphone.

We should all have the choice not to use wifi & should not be forced to live next to a cellphone tower. WiFI needs to be contained, not floating around spikey waves hitting us & permeating through babies' bodies. Wifi causes pain and damage to the cells, when I am away from wifi, I feel better and have no pain, I notice a huge difference in optimal health. Treat us all like babies, we need nourishment, we need protection, we do not need to be bombarded by dangerous invisible wifi. GO back to ethernet cable, it was safer, faster. Minimize the excess towers & bring it back from 50 towers in our quaint town, minimize to one tower, place that one tower away from residential areas, away from schools so we don't have to be forced to homeschool. Less is more. Since the wifi radiation permeates, I need to use my measuring meters to make sure there are no RFs and EMFs from the neighbor's home permeating in to our new and existing home. I'm being forced to buy 16 or more acres in order to avoid wifi radiation and smartmeter radiation from a neighbor's home, & I also am being forced to turn down house buying arrangements because wifi radiation from a nearby neighbor right near the property line, is too close to the house I'm interested in buying & settling down it. So I am forced not to settle down I am forced to be an EHS-electrosensitive refugee.

Can we have celltower curfews, where they turn off the celltower at night time when we are sleeping? The body and cells need time to rest, the body’s cells rejuvenate at night time when we are sleeping, and we cannot have quality sleep and have REM with RFs, radiofrequencies. Solar power has TONS of DE dirty electricity, causes convulsions, pain, headaches, symptoms. People think solar power is so good for the environment but it is the worst for our health and our health is more important than the environment, put our health first as the priority. Electric Cars have battery packs that have EMFS that exceed way off the charts where people are getting ELECTRICUTED just by sitting right near the battery pack, it shows on my measuring meters. I bought an electric car thinking it was safe and then I got sick and sold it back 2 weeks later. Remember our bodies are electric. We cannot have interference for our bodies to function

properly. We don't want to be forced to buy wifi radiation in the vehicles, remove the wifi, we had to remove the wifi out of our SUVs by taking out the radio hub, this is only allowed in Basic Vehicles, do not make this obsolete, keep this as an option. We don't want keyfobs, we do not want wifi controls, locks. We do not want wifi cities or wifi homes, make an option for non-wifi. Please take away these dangerous toys. Please help us, change standards, make strict limitations, minimize. Get rid of the dangerous wifi toys. For every technology run by wifi radiation, we need an analog, non-wifi version with no radiation offered.

Do not replace everything with wifi radiation and think that is better. Keep the analog old school basic options. We choose non-digital and dials over digital with radiation. We choose analog over digital, we choose copper landline over digital phone, do not make this obsolete. We choose DSL over fiber internet because fiber has high amounts of DE-dirty electricity. I am not the only one, join our Electric Sensitive Support Facebook Group page. Most of us are trying to escape the EMFs and RFs and are forced to live in a mobile home and travel around to escape a celltower being built next to us. Safe levels are 1.5 on a Trifield EMF Meter, 0.1 to 0.3 is safe on an RF meter, I can only sleep if it is these levels.

Starlink is polluting and ruining our night sky, get that out of our sky, no one should be allowed to mess with nature like that. We turn the lights off at night time because there should not be anything ruining nature and our circadian rhythms and our sleep cycles. Read the books of author Arthur Firstenberg who wrote The Invisible Rainbow, a book about EMFs & RFs & he spoke w/me on the phone, I called him for advice, he told me 4.5 acres is not enough to be away from wifi radiation, and neighbor’s smartmeter radiation, so I told him I was going to sell my home to find more acres, a place away from wifi radiation & move out of state, & he told me he felt bad & told me all of a sudden he is dying from a neighbor's smartmeter, & 3 weeks later Arthur Firstenberg died. Around the same time, my Uncle Art died, he lived in Connecticut and lived with a smartmeter, he kept falling. My Dad keeps falling & he lives w/a smartmeter in PA. My Mother has tremors from her using a smartphone.

Give us the option of non-communicating meters, preferably analog meters so we don't have to be forced to use digital meters. And I'm not talking about them using a smartmeter disguised as a non-communicating meter, where they can quickly switch it to a smartmeter if the electric company wants to, we need purely non-communicating analog meters in our home. I personally can not live with any RFs in the home, RFs need to be able to be turned off, if there is an off button that is usually not good enough because it still radiates and usually the battery needs to be taken out in order for it to produce no signal. RFs need an option to be disconnected or off.

EMFS, RFs need to be properly shielded and grounded, they interfere with the electric energy of the human body, animals, plants, life. The body needs to be distanced from EMFs, RFs, and DE-Dirty Electricity. And the EMFs, RFs, and DE need to be distanced from the body.

Distance is the key as well as proper shielding and grounding. Because health is more important.
~sent from an ethernet cabled desktop computer, no wifi. ~*SH* 9-22-26
