To: U.S. Department of Health and Human Services (HHS)

Subject: Request for Investigation into Persistent Health Problems and Possible Environmental Exposures

Dear Representatives of the U.S. Department of Health and Human Services,

My name is Luis Villamagua, and I am writing to request a thorough, independent investigation into the persistent health problems that have profoundly changed my life since my trip to New York City in 2023. Before that trip, I had never experienced similar health problems. Since then, I have suffered from digestive difficulties, cognitive problems, difficulty concentrating and completing everyday tasks, insomnia, widespread joint pain, and persistent physical exhaustion. As of October 10, 2026, these symptoms have still not disappeared and continue to affect my daily life and quality of life.

I am deeply concerned about what may have happened to me. I have become particularly interested in the phenomenon known as Havana Syndrome, or anomalous health incidents. Although I cannot establish that my condition is related to this phenomenon, I respectfully ask that my experience be taken seriously and considered alongside relevant scientific evidence.

I also ask HHS to investigate credible possibilities involving environmental exposures, electromagnetic fields, radiofrequency radiation, and other potential causes, without assuming a conclusion before the evidence has been examined.

I urge HHS to support independent research, improve medical evaluation for people with persistent unexplained symptoms, examine potential long-term health effects, and ensure that scientific findings and uncertainties are communicated transparently.

I am asking for help because I want to understand what has happened to my health, find appropriate treatment, and recover my quality of life. I also hope that further research may provide answers and help protect others experiencing similar problems around the world.

Please consider my testimony as part of your Request for Information on Electromagnetic Fields (EMFs), Radiofrequency (RF) Radiation, and Wireless Radiation Exposure. I sincerely hope that my situation will encourage further investigation and help bring answers to those who need them.

Thank you for your time and consideration.

Respectfully,

Luis Villamagua
Concerned Member of the Public
