To Whom It May Concern:

My patient Jenniffer Agro commenced care on December 5, 2023 for a medical condition characterized by severe electromagnetic hypersensitivity (EHS), radio frequency radiation, electromagnetic fields, and dirty electricity created by any and all digital meters. Exposure to these emissions has been associated with the worsening of her symptoms, which include headaches, fatigue, insomnia, cognitive difficulties, heart palpitations, tingling and numbness of the skin.

Based on my medical evaluation, it is my professional opinion that minimizing this patient's exposure to RF, EMF emissions and dirty electricity created by any digital meter, is medically necessary to manage their condition at this time.

Therefore, I strongly recommend that Jennifer Agro be permitted to retain her existing analog (non-wireless/non-digital) utility meter in order to protect her health, well-being and safety. It is my recommendation that she not be in proximity to any smart meter, legacy opt-out meter or digital meter of any kind.

Sincerely,

Dr. Shawn M. Carney
