FCC ET Docket13-84

Comment of Arnold Gore, Consumers Health Freedom Coalition. We are a group of Consumers organized loosely in the New York City Area, I have some correspondents receiving email's on Health and Environmental issues.

I am deeply concerned about the FCC failure to re-evaluate its wireless exposure limits issued in 1996. The DC Circuit Court of Appeals, one level below the US Supreme Court

Remanded the case of Environmental Health Trust v FCC over 5 years ago in light of the 11.000 studies submitted. Nothing has been done in response to the decision.

The FCC has even expedited the rollout of even more wireless installations as opposed to the safer wired infrastructure.

I use Verizon as my ISP. I hoped to use a wired ethernet connection for my desktop computer, but it does not connect unless I activate my wireless router with consequent exposure to wireless radiation. This wireless radiation does have harmful health effects for

Some people who serve as the "canary in the coal mine". I may not be sensitive today but will eventually be affected more drastically.

Some people with more sensitive systems were initially killed when cell phone technology was rolled out across the United States in phases. As reported by Arthur Firstenberg, in his Newsletter "No Place To Hide" July 1998 P.6 article "PCS Kills Ten Thousand". This was continued in the issue of September 1999 on page 11under Mortality Statistics (Continued) ,Initially the death rate as reported in the CDC's Monthly Mortality Weekly reports increased from 10- 25% for 8 to 12 weeks. after the electrically sensitive population died off the rate reverted to that prior to wireless installation

He published this data more widely in his book, The Invisible Rainbow, beginning on page 368 with detailed charts for Los Angeles, CA installation July 3,1997;San Diego CA November 1,1996; New York City, November 14,1996;Boston,MA November 12,1997;Portland,OR December 22,1996;Tulsa.OK November 21,1996;Jacksonville, FL October 15,1996;Chicago,IL November 12,1996 and Sacramento, CA March 12,1997.

For this to happen in every major city where wireless telephone service was introduced proves this technology severely effected large populations was not an anomoly, but was deemed to not warrant limiting this technology and relying on safer more secure wired communication.

I have disconnected my wireless router at night but since my neighbors do not I

am exposed. As the power of the installations has increased more people are being drawn into the electrically sensitive disability group.
