Brief Comment

Dear FCC Commissioners, In 2010 a wireless transmitter was installed next to my home. When it was turned on for the first time I was electrocuted. My hair fell out and my nose bled. From that day forward I had ringing in my ears, heart racing, vertigo, memory problems, flu like symptoms and skin rashes and bleeding. I saw a dozen doctors. I spent thousands of dollars. No one could figure out what was wrong. I never thought it could be the wireless. I had been under the impression that wireless was safe. I am very, very concerned that this technology hasn't yet been vetted and is not safe.I am permanently disabled and rely on my land line to communicate with family and my community. I will be moving into a rural area to avoid the wireless deployment of more 2G, 3G, 4G and 5G. There is a world wide movement of people, just like me, who have been permanently disabled. We are from all walks of life and all ages. Electromagnetic Sensitivity is recognized by the ADA. It is a permanent irreversible life long condition. Please take my experience into account. I have two lawyers who are researching my situation. I will not hesitate to use them. We need landlines and we need fiber to homes, not wireless. Sincerely, Shelley Masters
