PUBLIC COMMENT TO THE U.S. DEPARTMENT OF HEALTH AND HUMAN SERVICES

Docket: HHS-OASH-2026-0397

Submitted by: Direct Energy Weapons Agency, Inc.

Date: October 20, 2026

1. Introduction

Direct Energy Weapons Agency, Inc. sincerely thanks the U.S. Department of Health and Human Services (HHS) for inviting public participation in its review of electromagnetic fields (EMFs), radiofrequency (RF) radiation, wireless exposure, and potential health effects.

Incorporated in 2021, our organization advocates for civilians reporting unexplained neurological and physical symptoms that they believe may be associated with directed-energy exposure or assault.

2. Our Experience and Background

Our organization stepped forward to collect civilian incident reports because people repeatedly told us they could not find an agency willing to document their experiences.

We could not stand by while Americans were suffering and feeling that their country did not care. Although we lacked the resources and physical facilities to conduct scientific investigations, we established a process to receive complaints, conduct case reviews, and prepare incident reports.

To date, approximately 1,000 civilians throughout the United States have submitted incident reports to our organization.

Complainants describe unexplained pain, burning sensations, internal vibrations, pressure, sleep disturbances, hearing unusual sounds or voices, and other neurological and physical symptoms.

Complainants stated in their reports that they have no mental health conditions and that their injuries are often misdiagnosed. Many believe someone is remotely operating wall-penetrating energy devices against them inside their homes.

These reports do not independently establish the source of the symptoms or confirm exposure to particular technologies. However, the experiences and suffering described deserve serious medical attention and objective scientific investigation.

We have contacted federal security and investigative agencies seeking assistance and opportunities to share these reports. To date, we have not received a substantive response.

3. Medical Research and Our 6 Pillars Proposal

We are particularly concerned that civilians experiencing unexplained neurological symptoms may have difficulty obtaining coordinated medical evaluations.

DEW Agency developed its proposed **6 Pillars Baseline Neurological Tests** to encourage comprehensive medical assessments:

1. **Balance and Vestibular Testing:** Evaluate balance, dizziness, and inner-ear function.
2. **Extended High-Frequency Hearing Tests:** Evaluate hearing changes beyond standard hearing assessments when clinically appropriate.
3. **Cognitive Processing Testing:** Assess memory, attention, and reaction times.
4. **Automated Eye Tracking:** Evaluate eye movements and visual function.
5. **Advanced Neuroimaging (DTI):** Consider specialized brain imaging when medically indicated.
6. **TBI Blood Biomarkers:** Evaluate the appropriate clinical use of brain-injury biomarkers, including GFAP and UCH-L1.

We respectfully ask HHS and the National Institutes of Health (NIH) to review this proposed framework and determine which assessments may be useful for civilians reporting unexplained neurological symptoms.

Our objective is to help medical professionals identify and treat potentially measurable health problems without requiring patients to first establish what caused their symptoms or whether a crime occurred.

4. Recommendations for Federal Action

We respectfully request that HHS:

1. Establish an accessible national reporting system for civilians experiencing unexplained symptoms they believe may involve RF/EMF exposure.
2. Support independent medical, environmental, and scientific research to investigate reported symptoms and possible causes.
3. Work with the FCC and appropriate technical agencies to improve exposure monitoring, detection technology, and public safety education.
4. Encourage research into affordable residential RF/EMF monitoring and alarm systems capable of identifying potentially hazardous emissions when technically feasible.
5. Develop medical evaluation guidelines and referral pathways so civilians can receive respectful, evidence-based care.
6. Coordinate with appropriate federal agencies regarding reported concerns involving unauthorized electronic access, communications, and technology-related harassment.

5. Request for Federal Collaboration

DEW Agency would welcome an opportunity to assist HHS and other appropriate federal agencies by continuing to receive, organize, and refer civilian reports under an authorized reporting or referral arrangement.

We are willing to discuss sharing appropriately anonymized information from our records to support research and public health planning, subject to privacy protections.

6. Closing Statement

People are suffering today. They are asking for medical answers, scientific investigation, and a safe place to report their concerns.

We respectfully ask HHS not to overlook these civilians simply because the causes of their symptoms have not yet been established.

The United States should lead in medical research, public health protection, and the responsible evaluation of emerging technologies.

Thank you for giving organizations such as ours an opportunity to be heard.

Respectfully submitted,

Ms. Mechael Wright-Hodges, Founder and Executive Director
