Brief Comment

Wireless radiation has made me very sick. I have had to leave my job as a teacher, and completely change my life. Most of the country has been "sheltering in place" for weeks due to the COVID-19 virus...I have been sheltering in place for YEARS. Wireless radiation is harmful, not only to me, but to everyone. Myself and those suffering like me are just the canaries in the coal mine. The FCC must consider the multitude of studies showing this. The FCC's repeated refusal to consider biological effects from exposure to all types of wireless radiation shows a clear and dangerous intention to disregard the emerging science which must inform its decisions regarding public health. The agency's reliance on organizations of physicists and engineers for advice on human exposures has resulted in a sole focus on "thermal" effects, despite thousands of published, peer-reviewed studies showing biological harm, even at non-thermal levels, for various frequency ranges. The FCC's own admission that it is unaware of any other types of effects demonstrates a failure to actively investigate the issue by proactively engaging with the scientific community studying the short and long-term biological impacts of exposure to humans and possible interference with systems of the natural world. Failure to seek out and consider the latest science makes decisions of the FCC suspect. Moreover, the complex comment process used by the FCC virtually ensures that most commenters will be those who follow the activities of the agency

closely and have a financial interest in the agency's decisions.
