Research Conclusions

…*from 33 years and 2,000 case studies concerning Synthetic Electro-Magnetic Sensitization and Toxification and their effective remediation conducted in clinical wildlands White Zone locations in the desert South West by Smart Shelter Network*

7oct26

1. Electricity is the energy of life. (Nichola Tesla).

2. Synthetic/ anthropogenic/ man-made electricity and natural bio-energetic forms governing all life and particularly our own are dramatically not the same and mutually antagonistic.

3. Deteriorative effects resultant from Synthetic EMF saturation particularly in humans, but evident in all life forms, have been obvious and documented (see Tesla's diaries) since electricity's discovery and deployment…and are categorized by the following levels of effect:

A. ***EM Non-Reactive-*** these are people who report no sensed effects nor do they readily manifest any detectable metabolic/sensory or psychological effects on exposures. This category of patients constituted about half of the regional populace on beginning of our field observation/ case study work in 1993. They are today found to be essentially non-existent.

B. EM Toxified- comprising about 30% of the current regionally resident populace demonstrably presenting with EM originated debilitations in health, functions and well being but reporting no cognizant awareness of their relationship to EM Exposures. These cases more often than not present measurable deteriorative effects…especially over saturation duration… but remain unrecognizable to the patient…often nomenclature as *EM-Non-Cognizant.* This condition is more often than not correctable with competent meters and education/ resources and self-testing… unless the patient is Device Addicted..in which case, denial prevents education.

C. ***Electro-Sensitives-*** a class of EM Cognizant patients (originally numbering about 3% in the regional populace, escalating to 25-30% currently) who are cognitively aware of cause and effect correlation to debilitations (often life threatening or disablingly extreme) and EM Exposures. The vast majority of these would once have been considered EM Toxified but through education, meter availability and networking are currently capable of accurate self-diagnosis and more often than not…consequent effective remediation…through reduction or removal. Several of these cases have necessitated extreme protective structure domicile or very remote locals to

survive….essentially completely disabled by EM Impairment from contemporary social/ urban conditions.

D. ***EM Deceased-*** these are patients whose life has ended due to Synthetic EM exposures unmediated and more often than not boiler plated by insistent denial… which those of us in the addiction recovery/ sobriety community will recognize as the inevitable consequence of stimulus addiction…an ingredient in Electro-Toxification identical to the consequences of industrially induced formaldehyde crossing the brain barrier deliberately included in tobacco products and basis for the Tobacco Suits…a scenario which must now be repeated with Telecom. Most notable of these patients in Smart Shelter's case study inventory is Dr. Patricia Ammon, MD/ Ridgway, Colorado… who self diagnosed as Chemically Sensitive, refused all information about parallel allergenics to Synthetic EMF and died at age 58 two years later from untreated spectrum causes.

4. Those toxified and sensitized by Synthetic/ anthropogenic electricity and magnetism are not the weak, compromised, genetically prone or psychosomatic of the culture. They are…and particularly the informed and equipped Electro Sensitives…the most fit, vibrant, intelligent and buoyant of the demography.

ES does not attack the bottom rungs of our species…it goes after the top….MDs, triathlon runners, the intelligencia and artists particularly.

This became unquestionably evident a decade ago when 100 known and competent ESs in the Tabauache Corridor were interviewed over one summer…asked to describe the condition of their immune system prior to sensitization. 100% (this is not a misprint…it's actual) replied with exactly the same wording: *"I'm the one who never got sick."* If this statement needs explanation, nothing following here will be of any cognitive relevance.

5. Dramatic and identical new symptoms have developed across the majority of Smart Shelter Network identified Electro Sensitives simultaneous with each of the wireless communication upgrades in recent history 3G,4G, 5G and increasingly with 6G. Satellite escalation is nearly impossible to evaluate but increasingly obvious in deteriorative effect…in all species.

6. The most accurate evaluation of Electro Hyper Sensitization we've found is that of Dr. Olle Johansson/ Karollinska Medical Research Institute/ Stockholm(ret.)…which awards the Nobel Prize in Medicine. He defines it as a ***Full Function Impairment***… that is…not only is there nothing wrong with the patient…but indeed everything right… their being possessed of a genetically superior sensory and immune system reacting and debilitating to a deteriorating environmental condition long before others in the demography. The proof of this axiom is mindlessly simple and we have proven this hundreds of times here…remove the patient to known chemically and EM clear locations and watch the symptom spectrum afflictions disappear. (Warning: this must on occasion require significant duration and the clean environment must be

competently meter affirmed as clear of Synthetics). The author here is alive and well at age 80 today because of this axiom's accuracy…so are thousands of others…though accomplishing this level of environmental integrity is increasingly improbable and constitutes the single most critical challenge of current government to reverse.

7. Current and most past "scientific" research regarding toxic reaction in the Toxified and Sensitized demographies have employed Provocation Testing Regimen…an historic axiom of "modern" science: "*if you want to know if something is causing a problem in a patient, throw more of it at them and see if it gets worse."*

This is obvious insanity, dire contradiction of the Hypocratic Oath to do no harm and scientifically irrational to the level of idiocy with allergenics such as ES. The patient is already by definition in an hysterical escalated state of reactivity. Applying more measured EMF, chemicals, whatever….expecting linear and conclusive cause and effect results indicates dire deficiencies on the part of the research modeler. This mode of research must be stopped and all medical publications based on these procedures removed from medical archives as falicious…a disastrous embarrassment to our systems of medicine and government.

8. Remediation Regimen is the singular competent investigative tool in these fields. The allergenically reactive patient is surveyed for probable antagonists. These are removed one at a time…very often meaning removing them to known White Zone (synthetic emf completely free) locales…and in time duration sufficient to accurately note changes and remediation.

Smart Shelter has accomplished this work over decades on hundreds of patients with definitive results…see the accompanying list of 56 chronic inflammatory medical conditions reversed by this process including medically diagnosed Type Two Bi-Polar Disorder. Remember…duration is often the key here. The results are consistent and the procedure unquestionable.

We have accomplished this volume of case evidence by identifying, using and restoring remnant cell tower/ wifi radiation free locations in the complex geographics of the Desert Southwest wildlands…locales in which all other species, insectary, pollinators, flora and fauna likewise thrive in health…whereas in radiated/ cell reception areas they do not.

It is imperative as listed in our recommendation list for actions that this inventory be expanded through thorough public lands inventory, the sites preserved and protected and their specific uses dedicated to continuation of this work. They very likely constitute the last of what will remain standing as the species die off…including ours. This continues to metasticise in exact parallel to 5G, 6G proliferation and removal of radiation limits, public protections, industry spin and Dark Agency/ Dirty Tricks Thugging.

9. The Meridian System of Eastern Medicine is the key to understanding, remediation and proofs regarding the modalities of effect of Synthetic EMF. This was discovered by coincidence of the diagnosis of Electro Sensitization by a German Trained Naturopathic Physician and simultaneous study by a phd RN in Jinn Shinn Acupressure. Briefly, it will be found that all inflammatory exposures to synthetic radiation manifest in the inflammation blockage of proximity distanced meridian control points. Health failure following is unavoidable.

Dr. Andrew Weil,MD/ University of Arizona long ago predicted that Eastern and Western Medicine will neither progress much further until they are integrated. This is that juncture and it is critical to all our survival…even our military defenses.

Our conclusive proofs of this axiom again do not lie in Provocation Regimen…but in the fact that we daily successfully remediate severe EM toxification in ES cases through Meridian treatment…and have for 3 decades without fail…documented as saving at least 3 lives.

10. Synthetic Electro-Magnetic fields and radiation are subliminal stimulants and have produced the current nightmare levels of Device Addiction…particularly, though not exclusively, in our young. Their inclusion in devices is industry-intentional and must be criminally prosecuted and stopped.

As a 39 year clean and sober severe recovering alcoholic and drug addict, I speak to this issue with particular experiential authority. The sewing machine legs, denial, facial palor, myopic obsession and severe withdrawal reactions characterizing our device/ cell/ wifi addicted are identical to the effects of Jack Danials, Herioin, Cocaine and Meth in mine. The only answers are complete abstainance …an environmental impossibility…in an era where all our urban air is saturated with synthetic wireless radiation. At least the substances stayed in the bodies of the drug and alcohol addicted.

11. The establishment and protection of White Zone safe havens in which synthetic wireless and field radiation are absent is critical to all our children's futures and particularly to those of us already identifiably Sensitized. This is the single most effective move countering the current disintegration of the American Health Care System today.

12. Electro Sensitization is a Spectrum Disorder characterized in the individual typically with myriad impairments which are often changeable both in origin and severity over time and can only be safely and accurately diagnosed with competent removals of the antagonizing sources with duration. Listing of the known Spectrum Symptoms is available on email request to Smart Shelter. Because of the complexity and variables of this reactivity, the patient in their reports of effects and causes remain the only reliable sources for that determination until such time as its incorrectness can be established and proven convincingly to the patient themself.

13. Medical/pharmaceutical moderation of these symptoms is dangerous, counterproductive and life threatening to the patient. They are completely normal and critical alarm mechanisms mandating correction of the Environmental Anomaly causing them. To numb down these warnings and returning the patient to the deteriorated conditions triggering them is life threatening and contradictive to medical professionalism…also categorically stupid on the part of the provider.

14. Covid 20 is fast impinging and will not be so kind as Covid 19. The missing explanation and analysis not only of the Covid 19 era deaths, but its causes remain to be explained. The year two death statistics from Colorado Department of Health do not substantiate the unquestionable bias of killer respiratory virus on the elderly…they preferentially…by a factor of 2 to 3…killed the 20 and 30 year old set. Why? My VA physician asks the same question and today the statistical mortality bias remains. This is because that is the age category of the Wireless Device Addicted. It functions off the well known deterioration of wireless radiation on human immunology. Instead of recognizing, publicizing, funding, and remediating this…wireless technologies have massively increased in saturation, device use,, frequencies and junk science spin covering this up…resulting in immune deterioration levels far more dangerous than Covid 19 era conditions. This is the formula for a self-induced disaster which will occur any minute now. If this government doesn't correct this immediately…. obviously and by definition…the next one will….given that if it doesn't, there won't be one anyway.

Any biologist competent in killer virus behavior will state…the next one is on its way and it will be smarter and meaner than the last. This is contrasted by a global populace…instead of being ready, reduced, shielded and prepared…is now dramatically more addicted, sick, compromised and helpless.

There is a solution. We've lived in it for 33 years. We are hardly alone. You could be here too…
