For the Future/ Needed Work

"The first responsibility of any government is for the establishment, protection, insurance and longevity of the health and welfare of its citizens.

This axiom is self-evident…no amount of military power or defense, extractive or technical resources, economic prosperity or religious conformance are possible, or of any use whatsoever, to a populace too sickened to produce or survive to enjoy them.

This is exactly the condition of our country today…in which 77% of youth do not health qualify for military service (President Donald Trump).

What lies below will correct this dilemma…we are at literal states of emergency to ensure that indeed it does"

Gary Lee Duncan

Smart Shelter Network

Guidelines for The Work Necessary to Ensure Our Future

1- Create a ***Full Scale Department and Investigative Agency*** dedicated to Electro-Toxification, Addiction and Sensitization needs and effects to be established within HHS thoroughly independent of industrial/ military bias and influence to produce a national inventory of those affected, develop accurate Spectrum Symptom Listings, establish and deploy effective, non-medication Remediology and educate the public regarding Synthetic Electro-Magnetic effects and its immediate curtailment through Prudent Avoidance.

2. ***White Zone Diagnostic and Remediation Pilot Facilities*** must be constructed in which claimed or suspected EMR toxification subjects can be safely and accurately diagnosed through exposure reduction capable of sustaining this regimen in duration..identical to the sites Smart Shelter has utilized to lay casework in this field. Pilot facilities and programs may best be conducted in cooperation with the Veteran's Administration. Many of these sites are currently identified and deployable at minimal expense and administration.

3. ***Wildlands Safe Haven/ Estuary Locations*** currently identified and those which can be located in the future on public wildlands must be preserved and made available to practitioners and patients requiring their safety exclusively…and may advisably include proactive systems of identification and care similar to the Smart Shelter Land Steward Program (information available on email request).

This procedure can immediately begin with contact and procedures to assure continuation of the safe haven uses already performed by Smart Shelter over the past 18 years on Utah State owned/ administered lands through SITLA (Utah Schools and Institutions Trust Lands Administration). The key existent, endangered location occupies one ten thousandth of one percent of the land SITLA administers. Government's first responsibility is not to extractive industry but to the establishment, protection and longevity of the health and welfare of its constituency…an astonishingly small accommodation in this case. One phone call from the HHS Secretary or President Trump could instantly correct this.

Spencer Cox- Utah Governor-(801)538-1000
Michelle McConkie- SITLA State Director-(801) 538-5100
Maj. Gen Brian Tarbet-State Board-(801) 538-9600
Bryan Torgerson-Area Mgr.- (435) 259-7417

Thank you.

4. ***The Wikipedia definition of Electro-Sensitization*** must be corrected to identify accurately the Full Function Impairment as it is currently known, eliminating all statements and insinuation of psychosomatics and illegitimacy.

5. ***Official Recognition*** of Electro-Toxification and Sensitization need to be issued by the President and Secretary of Health and Human Services.

6. ***The Functional Impairment Disability Classification Creation-*** Electro/ Chemical Cognitive and Toxification conditions must now be officially recognized as a Full Function Impairment Disability along with protections and entitlements equivalent to all other disablements but not mandated for inappropriate medication application.

This requires the creation of a new class of disabling disorders not produced by any deficiencies or unordinary conditions of the patient, but by the deteriorations of the environment due to Anthropogenic/ Synthetic aggressors. Reactions and impairments due to these causes must remain as the exclusive qualifying domain of the patient experiencing them alone.

Full financial and legal responsibilities for these unnecessary and preventable impairments must be born by industry and the consumers producing them and treated as Capital, Felony, Criminal acts…equivalent exactly with crimes of violence, property damage, imprisonment, theft, fraud, and bodily damage…which they are literally. The financial, regulatory and punitive structure of this Classification will be separated from current conventional Disability classes and administration into a stand alone governmental entity fully funded (including liability for punitive damages to the patient) by proceeds garnered through taxation and fees paid by industry and the users at no taxation increase burden to the responsible public citizenry or government.

Medication/device treatment of these claimants will be prevented until such time that it can be conclusively determined though Withdrawl/ Removal testing to environs clear of suspected Synthetic Toxic agents in sufficient duration to establish a non-causal relationship.

A competent investigative/ diagnostic regimen for ES verification will be developed with trained, supporting and competent medical researchers and clinicians in cooperation with known and knowledgable ES Cognitive/ Sensitives incorporating the 27 known variables in the condition (list available on request).

The Functional Impairment Disability Classification will be credited in its origination and scientific determination to Dr. Olle Johansson/ Experimental Dermatology Unit Director/ Karolinska Medical Research Institute/ Stockholm.

7. ***Research investigating the Meridian System toxification*** from Synthetic/ Anthropogenic EMF will be conducted aggressively by HHS and protected from military and industrial influences.

8. ***A Research Inventory Review*** of medical publications now on file with Federal Agencies discounting EM Toxification and Sensitization will be thoroughly reviewed for legitimacy of procedures, funding and bias from industry sources and found mis-information permanently removed from archives as incompetent and compromised.

9. ***Investigation of Dark Agency/ Dirty Tricks*** spin and fraudulent actions by agencies historically and currently undermining recognition and protection of the ES community will to be convened with criminal punitive authority at the highest level of Government to include actions of discrediting, hacking, web content removal, communication impairment and employment termination including publication/media interference.

This work is best begun with investigation of the **October, 2024 Harper's Magazine article *"The Fever Called Living"*** to determine compromises of author Evan Malmgren, Editor Christopher Carrol, Art Director Katie Humphries and photographer Richard Rothman along with fact checker Sean (last name unknown). This investigation will include the posited assassination of Arthur Firstenberg also targeted for discrediting by the article… Recommendation is that attorney Dafna Tachover be funded and tasked to direct the procedure.

10. Medical statements will be required from providers treating Electro-Toxification/ Sensitization cases explaining known successes from simple removal/ remediation procedures prior to the patient's approved application of any masking medications, devices or procedures.

11. ***Previous ES Disability cases which have been denied through Social Security*** and other agencies will be reviewed, re-tried and when verified with competent testing and research approved, with benefits retroactive from the first filings for relief. (See Ruth Mathews Davis Case)

12. ***Protection Rights, Disability Access and Safe Havens*** free of Synthetic EM radiation/ toxins will be established by law, produced in all public venues and violations/refusals subject to prosecution to the full extent of Disability Law. This is singularly the only hope our children have of any future at all.

13. ***Medical School Training*** for all health care providers will be corrected to mandate competent and Electro/Chemical-Sensitive verified recognition, diagnosis and treatment of Environmental Allergenics…which today is completely missing notably in these institutions. Competence in these fields will be mandate to licensure for all health care professionals. The current categoric absence of these effects on human (and all other species) health is deplorable, unprofessional and a national disgrace.

14. ***Device Addiction Treatment*** will be mandate in all addiction recovery facilities treating it as a legitimate subliminal stimulus cross-addiction issue. Total abstinence from device use must be mandatory in recognition of its toxifying effect on all others in their environment…a violation of citizens' volitional rights to public safety and safe equal access, exactly equivalent to current DUI regulatory systems and subject to imprisonment and punitive fines on non-compliance. Intentional Industry induction of addictive radiation/frequencies will be putatively and criminally dealt with in manners identical to those levied against the Tobacco Industry for identical injuries.

15. ***ADA and VA Entitlements-***Recognition, qualification and benifits/ protections currently missing for Environmental Allergenically Impaired patients from Americans With Disabilities Administration and U.S. Veteran's Administration will be added to recognitions and entitlements in these agencies as well as all other Federal entities.

16. ***Public White Zone Estuaries***- will be established and required on all Federal, public and publicly accessible locations free of Synthetic Chemical/ EM Radiation toxins exactly equivalent to current wheel chair, disability access requirements. Guidance for these protections and procedures is best initiated through Dr. Olle Johansson/ Stockholm, Sweden…easily the global historic icon in this movement for health, sanity and justice and a principal in their current existence in Sweden. All public and publicly accessible meetings and meeting places must protect the Sensitized, Toxified and Prudently Cautious members of the community from addictive and health impairing exposures by requiring the absence of any cell phones, wifi or wireless radiation in these locals.

Summary

For this country to rank 27th globally in health care is embarrassing, counterproductive, dangerous and completely unnecessary…not to mention costing government and responsible tax payers a fortune and endangering the safety and military defense of this country. A comprehensive remediation program to correct the incompetencies of Environmental Allergenic treatment issues will remediate this…quickly.

An un-assessed portion of current diagnosis and consequent costs are producing up to 50% of current health care loading. Certainly, this is behind a very large percentage of disability costs…largely born by governmental agencies. These are recorded in health records in accordance with diagnosed symptoms…neither stating nor determining any causes which providers invariably label as *"We don't know."* This blinding of cause and effect has now destroyed public trust and effects of current health care. Left to withstand drug bandaged pain when pharmaceutical blinding stops working provides an inestimable motivation for stimulant abuse and addiction… because nothing else helped.

If you want to make a fortune, cover up a universally present cause patients can't identify and treat only its symptoms…which typically stops working in months. Then simply apply yet another masking drug and keep the squirrel cage turning….indefinately. Because we are so incredibly resilient…this can be extended for decades prior to patient decease…in the currently observed horrific conditions of health and mentality…terminal torture by prescription.

Through accurate Remediation Testing and Removal treatment, restoring normal system function to full capacity will not only dramatically drop current health care costs, but also allow the debilitated to return to work in White Zone spaces safe not

only for themselves but other employees already well on their way to the same collapses…reducing Disability, Homelessness, and Health Care burdens.

Because of the cross-addiction effects of Synthetic/ Wireless Device Subliminal Stimulants, this procedure will likewise dramatically reduce alcoholism, pharmaceutical and street drug abuse and associated addiction disorders (including domestic abuse and violence)…without cost or necessity of treatment.

There are no more readily achievable nor cost effective solutions to this terminal dilemma on the table or at our disposal.
