		State	NY
ZIP	10025		

Brief Comment

For nearly a quarter century, I have been forced to learn about and deal with the negative health effects as a direct result of stray EMF, RF radiation and similar. I have done this for myself who has suffered along with countless others who enlisted my help - and still are. There are solutions, but those solutions cannot be taken into account if no one will admit there is a problem. I've worked directly with The Environmental Health & Safety Department of my NY power utility, the only department in every power utility that knows, beyond a shadow of a doubt, that these fields cause health problems. However, they are in the cowardly business of not getting sued instead of in the integrity business of helping people lower their exposure limits. It is shameful that master electricians know nothing of this problem but one, secretive department at every power company does know. A long overdue law suit. So, no, I'm not going to repeat the "suggested" wording to attempt to gently coax you into waking up to reality. I'm going to tell you, instead, that after years of getting my lungs healthy, asthma-free, and infection-free, I got hit late this past Fall with chronic lung problems that began after smart meters were installed under my apartment floor for the 21 apartments in this building. The lung problems escalated when another 21 smart meters were installed for the gas. Electronics in my apartment started going haywire, poltergeist style, humidity dried up despite employing 2 humidifiers round-the-clock, the cable

modem kept rebooting itself and I was forced to get a new modem. Before I knew they were upgrading me to 5G, about 10-20 seconds after their fancy new dual

to 5G, about 10-20 seconds after their fancy new dual modem/router was turned on, my lungs clenched, I choked, and by morning had both a sinus and lung infection. I had the router and modem removed for a less powerful model and had my wifi cancelled and called in an electrician to get the building better grounded due to the massive stray EMF field that had doubled after the smart meter installations. Yeah. The hell I have been living with got complicated, with new stray EMF attaching itself both to the new gas lines in the building and the water lines. NOT SAFE. I did everything in my power to minimize the assault on my immune system, then got sick from the pandemic on March 9 - and have not healed from it, yet! Yet DURING the worst 2 weeks of this pandemic illness phase, a massive amount of toxic mold mysteriously showed up in my air filter and tray. Like nothing I have ever seen before. At least one doctor did research that showed, beyond a shadow of a doubt, that pathogens like mold became larger and more toxic in the presence of ambient EMF and RF-radiation. Ambient. This wireless and EMF problem COULD be the SOURCE of more potent pathogens, allergens, and even viruses. The science is out there, but the scientists are refusing to look at it - and now people are dying. Add to all these inconvenient facts the fact that 5G rollout started in Wuhan. Correlation is not causation, but is sure is a good reason to start looking for the real causes, including the space-weather changes affecting Earth's magnetic field. We can't do much about the latter, but we sure can do a lot about the former - starting with going with fiberoptic cable until the EMF and wireless problem has been identified and solved, first. For example: clearly 5G antennae were up long before my cable modem and router were upgraded, so in my case, the problem lies in the equipment, which seemed to act like the proverbial straw that broke this camel's back. Living directly above 42 smart meters in a partially grounded building with stray EMF on gas and water lines? Likely the foundation of the problem. Please help us. People are sick and dying, and industry keeps spouting absolutely useless data. I am a rational, practical, intelligent person who is not a conspiracy theorist, whatsoever. There are many more like me. Eg. EMFanalysis.com - a silicon valley engineer who has gone public about how he became sick and electrically sensitive - there are thousands

upon thousands of people who are sick like this - study us! Help us! We are your canaries in this coal mine. And shame on you for forcing our name and addresses to be "publicly available via the web." Now, we'll have to endure harassment on top of our existing and continued suffering.
