Regarding Docket 19-226, and HR 5397

Dear Sir/Madam

At this moment, the health and safety of every American is under threat and is vulnerable to Covid-19, a known immune system challenge to every health professional with credentials on the planet.

It is also known, from documents dating back to 1971 that the U.S. Navy studied in depth, as well as other governments and scientists ~ that radiation from wireless technology is a known immune destroyer.

The question here is not why are we avoiding 'upgrading systems,' but why are we avoiding the undeniable truth that every biological system on Earth is threatened by increasing radiation that causes known cellular dysfunction and biological chaos.

Hard-wired computers, fiber optic service, and dialing down radiation would serve the public's interest ~ not faster streaming. We need to design healthier technologies or simply dial down the radiation of existing technologies to preserve human, animal, and planetary health. Or, just let things exist as they are with a goal of health and preservation in mind.

If you simply type in: "EMF, effect on Cytokines," you will find many studies in PubMed that show cellular technology causes biologically unstable stress on the body, on bees, on animals, and on the body's ability to heal from ALL diseases.

Radiation is harmful to all of life, and experimenting with it without studies and without evidence that is is safe and healthy is a crime against humanity.

Personally, I have been affected by this technology, and lost my eyesight in one eye once this technology was installed in my workplace. Though 'invisible,' studies show that wireless technology causes Oxygen to change its properties, the body to change its biological health to a disease state with thicker blood, threats to eyes, testicles, brain function, memory, and the heart. Wi-fi causes ear damage, insect declines (a threat to our food supply), and disorientation to birds, bats and other wildlife. Simply put, Wi-fi and 5G are forms of toxic radiation. They are antithetical to Life and to Health. They are energy intensive, and not conservative in any form in terms of energy consumption, and are simply 'bad vibes' that 'harm life.'

Wi-fi is insecure compared to fiber optic and other forms of communication in terms of national and personal security. **There is no such thing as national security without personal security.**

Please consult the National Toxicology studies on the negative effects of wireless, and other experts who realize their patients across the globe are suffering from radiation exposure, chronic illness, toxic sensitivities and shortened lifespans.

Wi fi uses too much energy at a time when climate change is an obvious threat to all of life on the planet. Machines are supposed to be the tools of humanity, humanity is not supposed to be the tool of Machines.

Please consider that the FCC is supposed to be an agency that is beholden to the public and to individuals who invest in our nation. I am writing this to urge you to consider healthier alternatives that do not stress biological, personal, or natural systems. Or better yet, just don't install 5G. In New York City, where 5G was installed, we see a virtual wasteland of health and wellbeing. To say these are not connected is to say that life is not connected to anything in its environment, which is absurd.

No one should have to "Forcefully Opt In," to a technology that destroys health, liberty, the pursuit of happiness, clear thinking, and longevity. If someone wants to poison themselves, let them opt in. There should be no 'right of way' for these toxic substances to enter people's private domiciles from street lights or through other public means. And people who are electronically sensitive should have refuge in their homes and neighborhoods without undue aggression, malice or corporate greed as an excuse to exterminate healthy ecosystems, wildlife or persons.

There are safer technologies, and we should *dial down our exposures,* and not amp them up when the entire planet is suffering from immune assault as things stand.

Thank you for your consideration of these matters. I am totally against any 'upgrade' in radiation exposures for the planet for it is inharmonious with life and healing for man, animal, insect, or spiritual creature.

Sincerely,

Erica Schumacher
