I was working as a high school English teacher with nearly perfect vision. At age 49, when wi-fi was installed across the school, I began losing my eyesight, and had an ocular migraine which caused vision loss in my right eye, and a developing cataract. Though I had it surgically 'repaired,' no one in my family had these kinds of problems at my age, and my eyes still deteriorate rapidly in government buildings, libraries, and places I used to frequent with ease and joy.

I hope our government officials look into this issue, and remember that when anyone tries to 'rush' something through ~ whether it is a car sale or some other form of salesmanship ~ usually money is the purpose, and the only purpose. The stress from this situation has affected my work, my income, and place of residence.

Thank you for your consideration of these matters.

Sincerely,

Erica P. Schumacher

I have also sent a letter to the governor of New York, who I hope, as an advocate of the environment and the oppressed, will look further into this issue, and take the precautionary position into account. Thanks.

Thank you for your submission to the FCC Electronic Comment Filing System (ECFS).
Please Note that your filing will not be available for searching until it has been reviewed and posted by the FCC.

Confirmation Number: 201811141684709543
Proceeding(s): 16-421: STREAMLINING DEPLOYMENT OF SMALL CELL INFRASTRUCTURE
Filer(s): ES
Brief Comments: I am against the deployment of 5G technology across towns and neighborhoods; it is unnatural, and harmful to living organisms on the planet, and is in no way part of a 'natural ecosystem.' Wi-fi has been shown to be harmful to many living systems, Nature, animals, bees, plants, and human beings are vulnerable. After wi-fi was installed in my workplace, I lost 50% of vision in my right eye, due to an ocular migraine caused by the overload on my physiological system. It will affect generations to come, or worse, destroy human life. Profit and speed, designed by man, should not be placed above the delicate infrastructure of our bodies, minds, and spirits. Please allow towns and cities, and individuals to decide whether they would like to be irradiated 24 hours a day, so they can watch a movie faster, or be tracked as they move through a store. Think about your children, your grandchildren, and the future of our fragile Earth; think about the animals who can't tell you how they feel, or have early onset vision problems or anxiety. Think about your own conscience. Thanks.

Dear Ms. Gentile, Ms. Mueller and Ms. Thomas,

With over 30,000 studies indicating the oxidative stress (DNA damage potential) of radiation in its various forms on the human and biological atmosphere and cellular communication structure, I would like to express my sincere hopes that the idea to promulgate the Internet of Things across the globe, and in New York in particular, is halted.

I am against 5G for many reasons. First of all, it has never been proven to be safe for humans, birds, bees, animals, or the biosphere. The issue of Climate Change is important, and 5G and the Internet of Things will use a tremendous amount of energy to capture the globe in millimeter waves ~ which are not compatible with Life. This should not be a partisan issue: it is an issue for all of the planet.

Over the past years, as these radio frequency waves have been implemented and increased (you use the word deployment ~ which is a term of war), people including myself have had vision problems, issues with immune disorders, and serious or chronic illness. As a result of placing wi fi in to my employer's environment, I lost my eyesight in one eye, and as a result, my livelihood. Millimeter waves are forms of radiation that cause cellular damage; having information 'floating in the air' is not secure in any fashion for people or governments, in my view, and the purveyers of this technology have not proven it is safe for animals, birds, bees, children, or the biosphere. In fact, it is completely unnatural.

Please have our congressional representatives **vote against S.1611** and continue to protect our populace, our biosphere, and our planet. I am not an activist, but I am a very concerned citizen regarding present state and the future of our planet. There are much safer forms of technology; please delay or halt this onslaught and deployment of unnatural radiation on the planet and in our communities.

Thank you for your consideration of these matters. Sometimes avoiding a course of action is the best action to take. Particularly when it comes to technology that has not been vetted or proven to be harmonious with biology, and in fact, is full of potential for damage and destruction in the name of profit.

Just One Study, of many. (Millimeter waves cause blindness)
