Dear FCC staff member,

I understand that the FCC is asking for public comments on whether it should revisit its standards for human exposure to radio frequency radiation. My answer is a very strong, *Yes!*

My life and the life of my companion were definitely affected by the six cellular phone towers placed on top of a three storey apartment building on Haverford Avenue near Rhoads St. in Philadelphia, Pa. Our home was three stories high and was only *fifty* feet away from the apartment building I just mentioned.

The six cellular towers were placed in the year 2002. When I or my companion would sit in our lounge chair in the living room, no matter what time of year it was, we had "tissue heating" from being in a direct line opposite the cellular towers .It was very unpleasant because nothing we could do would cause this excessive body temperature to go down to a normal level. I developed brain fog and extreme fatigue, no matter how well I had slept the night before.

After a while, my partner and I noticed that our sleep cycles were shortened and we could not get a decent night's rest. We called in a building biologist who tested the EMF's –his assessment was that in time our health would be severely affected by the radiation. He advised us to sleep on cots as far from the source of the radiation as possible which was at the far end of our living room or in the basement. This helped a little but we decided to sell our home and leave the neighborhood.

I feel that cellular phone radio waves are dangerous to health. I don't need any greater proof than the experience I went through. There should have been years of testing the safety of cellular phone towers before they were placed in massive numbers. Cellular phone towers are much too close to peoples' residences. In fact, I feel that other than law enforcement people having cellular phones, their development was not strictly necessary. Land phones are much safer and should be maintained for all those who want them.

Sincerely yours,
Carol Ward
