The FCC must step up to the plate and adopt the Precautionary Principle to protect human and environmental health: the current lack of safety testing for nonthermal biological effects from exposure to RF electromagnetic fields below 6GHz should not be expanded to apply to frequencies above 6GHz. The FCC should stop being the lapdog of Big Telecom. While wireless radiation has adverse health effects on all living things, the adverse effects can be devastating for the percentage of the human population -- like me -- who suffer from electromagnetic hypersensitivity (EHS). Thank you.

Re: Targeted Changes to the Commission's Rules Regarding Human Exposure to Radiofrequency Electromagnetic Fields
