Brief Comment

I live in rural America and on a farm. I am opposed to this proposal to do away with radiation concerns and "maintain and expand current RF guidelines" for 5G and 6G. We are the only country in the world that does not officially recognize the non-thermal, long-term, internal, cumulative effects of man-made microwave radiation, of which 5G would be at higher frequencies. All other countries recognize this, and have MUCH lower permitted radiation levels than we do, as well as limit wireless, some keeping it away from schools and hospitals, some banning cell phones and wifi in schools, some refusing to let 5G be installed, and on it goes. Why is the U.S. at the bottom of the list of countries concerned with wireless safety????? 5G depends on close and constant radiating....from electric poles, from neighboring roofs, from private property right-of-ways not previously open to unfettered use by the wireless companies or non-public utilities, which the wireless companies all are. Their ONLY concern are their profits, easier and cheaper access to spying on us and monitoring us in our homes, which 5G would give, and, if you read the writings of the Globalists, keeping us dumbed down, unable to think, and debilitated, since this radiation directly attacks the brain and nervous system, being a neuro toxin which is harmful to all life They are also concerned about suppressing safe technology, which exists, and is far superior to wireless. This is fiber optics to the home, hardwired, and with no health effects. This very fiber

is used to back up this terrible, toxic technology. This is techno dictatorship, in a country with a Constitution (4th Amendment is being violated here)

Constitution (4th Amendment is being violated here), and Capitalism, which is here being rigged, making sure the better and safer project is suppressed, while the inferior, harmful one is forced onto us. Those who are educated in my county do NOT want 5G or 6G coming in and being forced on our farms and environment, which is unnecessary, and solely for the profits and malfeasance of the wireless companies. Fiber to the home, hard-wired, which is safe, should be the ONLY consideration for rural environments. I myself am personally sensitive to this radiation....I get headaches and pressure on the head when I am close to a wireless router, especially a strong one, and have to leave the area and recover. I limit my time shopping in town because of the proliferation of cell towers that makes going to town, which used to be pleasant, a dreaded experience. Two websites (and many others) have thousands of sources they document, which are expert, on the dangers of wireless technology: https://www.safeemf.com - Dr. Joel Moskewitz's website, and http://scribd.com/doc/291507610 - Dr. Ronald M. Powell's writings on the subject. Both are scientists and experts in this field. I urge the FCC NOT to fast-track 5G and 6G for the profits of the wireless industries, in fact, to give up on them....fiber is far far superior to any generation of wireless they can come up with, and to listen to the thousands of people who have contacted them complaining about their selfishness and shortsightedness in pushing harmful technologies.
