AFFIDAVIT OF Diana LeRoss

State of Washington]

King County]

I, Diana LeRoss, attest that my statements are true to the best of my knowledge.

Comment round for ET Docket No. 03-137 and WT Docket No. 12-357.

1. My name is Diana LeRoss. My address is 116 Fairview Ave NE #930, Seattle, WA 98109.

2. I am a technical writer/editor and project manager.

3. I am hypersensitive to electromagnetic radiation. Approximately seven years ago, I began experiencing skin and nervous system problems. I had a cordless phone, a cell phone, and a wireless modem. I had no idea of the risks posed by these devices to my health. When I measured the EMR emitted by these devices, the readings were greater than 2,000 microwatts/m2 for each of these devices. I must stay away from these devices in order to stay healthy. As well, my sensitivity increased to include fluorescent lights. If I use a cell phone for more than a few minutes, my skin burns. In order to use my computer, I must use an anti-radiation screen (3M now sells these). When I am exposed to fluorescent lights, I become nervous and anxious. I would be happy to discuss this with interested parties.

4. Dozens of scientific studies have shown negative impacts of EMR on human health, even at low levels of exposure. The most commonly accepted guidelines are the Building Biology recommendations that list 1,000 microwatts/m2 as the threshold for "extreme concern" (http://www.baubiologie.de/downloads/english/richtwerte_2008_englisch.pdf). On May 31, 2011, the World Health Organization's International Agency for Research on Cancer (IARC) classified radiofrequency fields as "possibly carcinogenic to humans." The FCC does not use biologically determined guidelines that affect health, but rather uses a standard that measures thermal heating of biological tissue. The premise that there are no adverse impacts of EMR on the human body until it is cooked is

completely ridiculous.

5. I urge the FCC to adopt new RF safety guidelines that take into account published research on the biological effects brought on by the ability of RF signals to communicate with living tissue, and more specifically, to consider the Building Biology guidelines for human health.

Respectfully submitted by

Diana LeRoss
