Comments for FCC on Notice of Inquiry, ET Docket No. 13-84

The current RFR exposure limits have impacted my wellbeing and caused me to experience health problems. I experience atrial fibrillation when I am exposed longer than a few minutes to these wireless radio frequency waves. My heart rate increases, and my heartbeat becomes irregular. I begin to sweat profusely. This impacts my ability to walk or exert myself even mildly and I am often too weak to function normally.

I first realized this when my family installed a wireless router for our internet connection. My incidence of atrial fibrillation (afib) increased drastically. Months later, I learned that radio frequency waves can affect health. When I began to experience atrial fibrillation, I turned of the router, and the afib went away. I did this several times, many not realizing that the router was on, experiencing the onset of afib, and then checking to make sure it was off, and finding that it was left on. Now we keep the router off, turning it on for a few minutes at a time.

When I am in a store that has wireless available, I try to shop quickly. I am an elementary school teacher and my school has installed wireless Internet. Fortunately my classroom is far enough away from the device that I am OK, based on the meter measurements from the one I use. I worry about the students who are exposed who do not realize how it is affecting their health.

Thank you for this opportunity to share my experiences.

Sincerely,
Diane Langley
