Brief Comment

Hi, I am one of the thousands of people who are affected by wireless technology. The reason why, I say thousands is because majority of people don't know why they are sick. It took me 6 years to figure out what was making me sick. I have headaches, nosebleeds, heart problems and dizzy spells. I have also experienced memory loss which is the most scary part of wireless radiation. It is highly harmful to people and closer these towers are the worst it gets. Consistent exposure is what is really harmful. I had to move my office 3 times, because I am trying to escape the pain of this technology. Yes, I do use phone and I have internet but I don't have wireless in my home. I use wired and it is safe. I have also noticed our wild life on my property is diminishing every year. Birds which we use to have abundance off are disappearing. Please make these rules stricter and don't allow towers close to each other or close to our homes. We are all are affected by it. This technology doesn't discriminate. Even if you don't get constant exposure because you far enough from tower you still will get exposed to it and affected by it. Look at independent studies of people who are impartial and please make the right decision not guided by money. How much is your life worth? How much is your kids life worth? You won't lock you self in a box. You will go out with your family and be in constant radiation box. Eventually, this will make you sick as well. I talk to people who work by these towers and they are sick. They have same symptoms as me and my family. Radiation or RF is a real thing. People are sick and in many cases can't live in regular

cities. They are forced to move just to survive. We are destroying thousands of lives by not acting. Please don't make this only about money. For once lets look at impartial data and lets make responsible decision. We closed our country to save 100 k lives and this technology will kill millions. NO it won't happen over night but it is happening already. Don't allow this to happen to people. sincerely, Ewa
