Request for Information on Electromagnetic Fields (EMFs), Radiofrequency (RF) Radiation, and Wireless Radiation Exposure

Hello,

Thank you for allowing the public to provide comment on this very important issue of concern. My name is Nichole Collins, I am a divorced former military spouse and single mother of three adult and twin school aged children. I am writing to the DHHS in response to the request for comment on personal examples of any health effects of Electromagnetic Fields (EMFs), Radiofrequency (RF) Radiation, and Wireless Radiation Exposure we might have experienced in our daily lives; though, to be fair, evidence shows this should not even be necessary given the vast body of knowledge that exists on this topic. The invitation for comment centers on our experiences with possible health effects of wireless, radio frequency radiation, and EMF exposures, I assume this will be to go along with the FCC invitation for comment on the same topic as it relates to a failure to update wireless safety standards. I will attempt to detail my experiences in an organized fashion as much as possible providing as much detail as I can remember hoping this will be relevant

enough to be able to provide some needed traction on this issue, keeping in mind my particular situation being born on a military base at Fort Knox in KY then marrying into the military at which point we lived on and around numerous military bases over a 17 year period. These included Moody AFB in Valdosta GA, NAS Jacksonville for a short period, Fort Campbell, KY, Fort Polk in Louisiana, and then Fort Bliss in El Paso Texas where I have lived since the year 2013. Prior to this, growing up, I lived on and around Fort Knox in KY and Fort Stewart in the state of Georgia. This I feel is important to point out for many reasons, the first being the fact that should be known is that the military is in use for many purposes of all different types of frequency based technologies for many dual uses that can lead to a great number of health issues that has been throughly documented over many decades. Though, it is certainly possible to have any list of health symptoms from simply being exposed to the many toxins reportedly on these different military bases, as well. So, I do understand that would be something that could be brought up when discussing this issue. I am also now very much aware as someone who has lived on and around a list of military bases that each military base is specialized to some extant and could be engaged in some form of experimentation of those particular weapons and methods on the civilian population who may be living and working on or near these military bases, and these would most certainly also involve the public health systems on or near those locations.

I should point out that sometime in about the late 1990's I became aware of some extraordinary things happening to me after I had begun attending a local college while living in the state of Florida on the East Coast about 30 minutes to the North of the West Palm Beach area. I ended up working at the college in their print shop where there were computers being used for the graphics and design print projects that would be completed in the college print shop while I was working at and attending this college. I took this job under the Federal Work Study Program. I then was offered a job full time outside of the school, and it was at this job that I began to notice some very odd things happening to me while I was working there. I should point out that this may not seem relevant to the issue of health effects from Wireless and EMF, but my experience has been that this weapon system was in development and being experimented for its many dual uses while it was in development for civilian purposes.

The types of things that I would experience initially regarding how I became aware that I was a human research subject and being targeted have involved being stalked and having people to follow me at the different places I had to make deliveries to in my daily job assignments. This was not something I had ever experienced before, and it is just something that happens to many being targeted where one day things are fine and normal and then out of nowhere there is no longer the

possibility to be afforded for any peace and on that day the life that you once knew is no longer the same is the only way to describe it. The next thing that I noticed would have to be the thought reading. While in the print shop office, where I worked on bindery equipment alongside the graphics design team, who practically right away began saying things in their conversations with one another that I had been thinking while I was completing work orders for delivery to the print shop business customers. This increased along with the experience of stalking and even led to an incident where I became aware of vehicle tampering while I was driving the company vehicle. This is an important experience to note because I have since learned of an FAA patent called the PFN TRAC patent for short that details an earlier patent citation also granted to the same individual who was given the FAA patent that allows for using wireless sensors inside the vehicle along with this system that would involve employing satellites and remote sensing to monitor and in effect to remotely disable any vehicles in the vicinity of the airport. I assume this is a radius that is in control by the FAA but speaks to the existence of the vehicle kill switch to a larger extant, in my opinion. That is also based on the experiences I have had in my current location a short distance from Fort Bliss and the El Paso International Airport. To me, this is important because the FAA has its own radio frequency radar and radio frequency tower systems, its own drones and other technologies, and this patent details coordination with a long list of federal agencies outlined in

the patent stating this would be a global program making note this patent refers to people being monitored as “wet ware.”

The fact that this system coordinates with federal entities is not what is most problematic to me, it is the potential negative health effects and the ability to monitor and manipulate individuals that is problematic and needs to be regulated, so that this is not being used as a tagging, tracking and trafficking program because that is what it seems to allow. The monitoring being referred to appears to indicate this is possible without any wearable or any device and was granted in the early 2000’s just to keep that in mind. I would point out that in 1974 Dr. Jose Delgado had after years of experiments conducted on different animals using electromagnetic fields having concluded by the end that mind manipulation could be achieved without the need for any implant or wiring.

To give an accurate and thorough detail of my experiences over the years while I believe I was being without my knowledge or consent exposed for experimentation to these different technologies for a host of uses is what I hope to achieve. I began noticing that my coworkers while in the process of completing jobs on their computers were repetitively saying my thoughts out loud in conversation each day. This made me very uncomfortable to say the least, and was obviously something that I had never experienced before but that very soon after began

happening increasingly in other places too, such as doctor's office, dentist's, schools that my children attended and things of that nature. I will point out that there is also a patent in existence to do this very thing to be able to read someone's thoughts from a monitor using electromagnetic fields. I know that this is not typically the first symptom being reported by those who experience the health effects of wireless and EMF, but I do feel it is important to give some context that these types of symptoms that I was having at this place of employment were taking place while my coworkers were on computers behind a wall unseen by me, and this was years before most people were collectively in the habit of using cellphones and wireless devices. Again,it is important just to keep that in mind, that I could not see what they might have been doing on those computers behind this wall besides what I knew was their role in graphics design. This became so frequent around this time period that I ended up giving them my notice and never going back. I did not tell them why I had left; although, I am pretty certain they knew exactly the reason why. This experience ended up following me after this and has not ended to this day. I have since determined some parts of this may have been a lifelong experience for me in terms of non consensual human subject research in many ways due to my being born on a military base and later on finding that my grandfather had been in the Navy, was a lawyer, and served in the FBI under J. Edger Hoover. This is relevant to me because it shows that I may have been used to test

various sophisticated weapons as someone who might have been considered a convenient subject or a target of opportunity.

For the purposes of this comment, I do want to stay on track with when I first began noticing the symptoms that many of which I do still have that followed with me persistently from state to state and continue, since I first noticed them in about the 1997-1999 time frame. I usually will say that it was mainly in about 1999 because that is when it became something that followed me, making me very much aware of the potentially global nature of this program. That is not to say that I feel that every person describing similar symptoms is being targeted, clearly, that is not the case. The symptoms that I could observe had nothing to do with any wireless technology in my possession and came shortly after this first experience I described where I then met someone and then married that person who was at the time enlisted in the Army National Guard and also worked full time in the Aeronautics industry at a Northrop Grumman facility.

It was while living in an apartment together with my ex husband in Florida that I began to quickly notice a long list of physical symptoms that began slowly appearing over time moving from organ system to organ system; this finally culminated in what I came to understand based on blood test results that I had gotten on Fort Bliss in about

the 2017-2018 time frame was most certainly based on my own evidence and research, the result of oxidative stress.

The first real physical symptoms I began to notice was probably the all over body heating and cold sensations, I then began to experience recurring periods of deja vu, prophetic and manipulated dreams along with prophetic ideas and thoughts much of this involved cataclysmic and lucid dream scenarios.. I then started to experience different symptoms of a variety of seemingly related cancers that most of the time I would go to see a doctor to be tested for these and they would not give me any real diagnosis, but they would often say they saw something, only that it was nothing to worry about or might simply need further testing. I did experience problems with breast pain and breast milk lactation while breast feeding my first and second child and sought treatment for this numerous times but once again did not receive any diagnosis other than to point out unexplained breast tissue scarring a couple of years after noticing this issue that was years later used to convince me that this might be something cancerous, and though this is a bit difficult to describe, but my experiences with what I later learned is referred to as remote neural monitoring that is a more prolonged version of what I had experienced in the print shop, I was made to understand that I was being targeted for different adverse health effects for various dual use reasons.

It would not be altogether difficult to imagine or to prove that there are immense revenue streams that have been established with no real proof of any voluntary human research subjects ever having been put into the informed consent database. If any agency that has benefitted from MOUs and technology sharing agreements can show the results of how this advancement has taken place from voluntary subjects and not by way of loosely held arrangements and executive orders, I would suggest that there be some kind of hearing to demand proof of that information that to my knowledge has not been provided by any agency when asked to provide it. Also not all that difficult to prove, is showing that there is a great financial advantage to be had in establishing a method to conduct human subjects research while creating in the population various adverse health effects and then being able to provide them the cures in the form of a pharmaceutical drug or some other expensive treatment. That too is now something that has been patented and in the patent it is revealed the method used to create adverse health effects in a target without them knowing. These targeted symptoms were actually being delivered to me in the form of death threats that appeared to me much later on in my targeting, and this actually persists as a method of terror that must be thoroughly exposed for what it truly is because this is in fact being reported on a global scale. With this in mind, after experiencing what I tried to explain away over the years as the product of aging or some natural condition, at some point, revealed a systematic

pattern of organized assault. I then began to notice these symptoms would move to other areas so as to avoid detection or to avoid causing me to develop widespread and altogether too numerous to be believed chronic diseases. These were things that would cause pain enough for me to notice but then would move to another area making it difficult for me to get any diagnosis. The first health effect of this experience caused me to have to require significant dental work that I did not need in the past and though this was diagnosed initially, this was later retracted by a dental provider in Louisiana who insisted that I never had this condition. At some point in the time between 2003 and 2006, I began to have chronic allergies and was told I might have sinusitis or allergic rhinitis and at various times did seek treatment for these. I now no longer have either of these afflictions, just to show that this technology can not only cause different symptoms across a spectrum but that these can be effectively dialed in at any time and with seemingly applied precision. In about the year 2000, I began to experience hair loss that I had never had before, my hair went from being healthy and pretty thick to slowly noticing that my hair was beginning to quickly recede and thin out to the point of bald spots from this sudden chronic hair loss. Later on, while living in base housing on Fort Bliss in Texas, I began to notice my hair would fall out persistently in large clumps that is how bad this got to be,and went on for a number of years in total escalating in severity from about maybe the period from 2000 through about the year 2021 time frame, and I did

attempt to find the causes but tests results once again provided no definitive diagnosis to provide me with any relief on this issue. I then started to seek medical treatment and advice about some of these different conditions I was noticing after realizing it seemed like I was developing a number of what I thought at the time were seemingly chronic conditions though when I sought treatment for these I rarely if ever got a definitive diagnosis that would offer any end to those conditions.

After a number of years of thinking I had suddenly developed all these different conditions, I began to experience what I would learn were some of the symptoms of thyroid disorder, though I did not know it at the time and kept reporting allergies to certain chemicals and foods, even perfumes, chronic fatigue, drowsiness, cognitive and executive decline, memory loss, hair loss, metabolic issues, vision issues, sleep issues, heavy menstrual bleeding, panic attacks, heart palpitations, urinary incontinence, skin disorders such as unexplained breakouts, rashes and sores, poor circulation in my legs, restless legs, bloating and stomach pain, back pain and problems walking. I began having severe gastroenteritis, to the point that I sought treatment for this condition that was causing me severe abdominal pain and bloating, constipation, and that was leading to chronic back pain,where an ultrasound that was ordered revealed that I had an extreme amount of excess gas in my stomach with urine tests that showed I had extremely high levels of flora

and fauna in my urine sample. I also began having extremely heavy menstrual bleeding that I sought treatment for, again, tests came back negative and I had no diagnosis, but the results indicated something was observed that would require further testing.

This experience of struggling to recover my health and seeking treatment desperate to find answers continued for a number of years with organ system after organ system to the point of developing in a pattern, culminating with symptoms of heavy bleeding and chronic fatigue, persistent anemia, that lead me to develop chronic nutritional deficiencies in spite of being overall relatively active and healthy prior to developing these conditions. For the most part, most of these symptoms became chronically disabling after the birth of my twins in December of 2013. That is around the time that I struggled with debilitating symptoms that made me seek consistent treatment and where my regular physician seemed to be giving up at one point by concluding that I was simply a hypochondriac and because an earlier physician had mistakenly put me down in my record as being obese that I simply had these conditions due to overeating, which simply was not the case in reality. Even though, this military physician and others were very happy to give me any tests I requested, there was no real path to restore my health until one day I went to have blood collected and nearly collapsed while having my blood drawn, which lead to me by happenstance being diagnosed with Hashimoto's

Thyroiditis Disease. Keeping in mind that while I did at one point develop a Goiter not long after my twin delivery, my thyroid is now in perfect working order without any medication or medical treatment. My fatigue was so severe and painful at times to the point that I could no longer walk with my usual gait that made me to think I was developing some type of other chronic disease or even other autoimmune disorders like MS, since I was increasingly unable to walk without being in extreme pain, I could not stand upright for long periods because the fatigue was so severe that it would move to my upper back causing me to feel exhausted and in pain, I also was experiencing the unsettling symptom during periods of rest of tingling sounds in the area of the nape of my neck making me to suspect that my blood brain barrier was under attack. I could not walk any distance without resting and could not run after my twins when they were toddlers without having to stop because of the pain in the bottoms of my feet and ankles. and other joints were always in pain. Around this time, I noticed that I was also beginning to have trouble swallowing, and my tongue had enlarged so much that I was having the sensation of choking and even saliva and mucous was abnormally increased giving me the sensation that I would suffocate especially while sleeping; not being able to swallow also was causing me great concern and was largely the reason I had developed the snoring, this is also a symptom that I no longer have.

While I experienced these things, all of this led me to have digestion, sleeping and urinary issues, I was given a 24 hour sleep test at one point that led me to be prescribed an APAP machine that was connected to an application on my phone with direct connection to my military specialist. At which point, this machine nearly killed me on two occasions while I used it during sleep at night. This forced me to immediately cease using the machine that I felt at the time I needed to help me to stop snoring and to get a full night of restful sleep because this was increasingly interfering with my driving. It was around this time period that I continued to develop chronic sleep issues and other breathing problems related to the sudden onset of this chronic snoring, to bladder incontinence issues. As a result, I experienced sleep deprivation and for some reason vivid nightmares as a result of this. Later on I was subjected to intentional sleep deprivation resulting from what I had learned was possibly an experiment to analyze and or manipulate my dreams, to implant simulated dreams while performing things like remote viewing and voice to skull technology on me while in the middle of my deep REM sleep cycle. In fact, these things were being done to keep me held in a state of entrainment to subject me to vicious tortures that I will not likely be able to adequately articulate due to the time constraint. I have been working on references and resources to submit with my comment and also wanted to ensure that I could articulate the same sentiments in both my comments because they are related and cannot really be separated.

Around this time period where I came under heavy attack by these forces, I was caring for my children who at the time were all attending school and also coming under attack there, while my now ex husband was on a deployment to Poland. As soon as he was away on this deployment that is when I began to notice that not only was I developing oxidative stress from chronic exposure to frequency radiation only learning this in the process of trying to restore my health for the sake of my children to be in good health to take care of them better and because of how debilitating these effects were, but I soon learned this was not just an effect of using wireless devices or being surrounded by them. I began to understand due to the nature and repetition of these experiences that this was perhaps a targeted weapon system directed at me possibly by criminal or rogue elements of various agencies, contractors, organizations or even by some type of criminal infiltration perhaps even being approved by way of legal partnerships just going based on EO 12333 and its allowance of human experimentation for the purpose of national security and including the Bureau of Prisons. I began to be made much more aware that I was being assaulted while I was being targeted heavily increasingly by anonymous individuals without end and while being made to appear to have no end and no way of redress and having the appearance of legality even as I am perfectly away this is organized criminal stalking and harassment being carried out on me everywhere that I go. This also arrives with vehicular mobbing on the streets

that became quite violent in my ex husband's absence- this led to a number of staged police pull overs, car accidents, flattened tires, broken windshields, organized acts of sabotage to my vehicles and this was also done to the vehicles of my older children as they became old enough to drive. We were each one of us being subject to the exact same attacks. There were in conjunction with the symptoms that I was having organized stalking or cause stalking as it is commonly referred that was also noticeably taking place at doctor's offices, dentists, optometrists, schools, places of business and government agencies and much of which led to sadistic acts of sabotage to deny me honest services to maintain the safety of our vehicles and by engaging in efforts to block me from receiving services owed to my children. I could give countless instances of being denied access to base services and entry to Fort Bliss to provide my children with care when they were assigned to Fort Bliss even after my separation and divorce from the 2017-2019 time period most of which was used in a very malicious defamation and slander campaign that largely involved the creation of false reports and narratives. I was denied free and reduced lunch access even though we qualified and I was denied appointments in various government assigned programs and agencies that my children were entitled to as military dependents. It was also simultaneous at this time that I began to have people nearby reporting me maliciously to police and other agencies, this continued unabated until fairly recently actually. I should point out

that I began noticing drone stalking that was very dangerous was happening to me and my kids at night and these would follow along with my vehicle that recently the many years of physical evidence I had collected was viciously removed from an inactive cellphone I was using to document these activities, many of these drones that stalk me, I now understand have also been weaponized for different purposes . I was being terrorized while being tortured with sophisticated military weapons as though the participants are involved in an invisible asymmetric guerrilla warfare of some kind, this is something that was so criminally abusive towards me that when this happened all of these things put the life of my children and myself in danger each and every day. I have been assaulted to my heart so extensively at this point that I am now certain this has lead to permanent damages. In fact a felonious crime was carried on my heart on the night of December 27th of 2022. This was done to me while I was walking to check our mailbox down the street, these were two very large weaponized drones possibly in use by DHS or the CBP. I have dealt with these criminal abuses, while I was very sick from over exposure to radiation frequency from being used as a human research subject.

As I have increasingly developed condition after condition during this period to varying degrees from 1999 to the present day, I first noticed a prolonged effect developed while under extreme assault that I was after this incident continually struggling with executive and cognitive issues

that were causing me a great deal of emotional and physical duress especially given that I was still in my early thirties when I first began to notice this particular symptom that like I said I did not have any knowledge of the existence of any of these weapons or programs at the time, this was our first time living on a military installation, so I was not at all familiar with military life even though I was born on a military base in Fort Knox. This was being done to me from the very first day we arrived at this installation while our family was living in NCO housing on base at the Fort Campbell, Ky Installation. This became so severe over the years after this experience that this particular symptom persisted leading me to develop generalized anxiety because of the disability that this caused me, and because of the ongoing attacks, I began to experience panic attacks while driving my children around after being transferred to this area and after living on the Fort Bliss military base for three years time. These different attacks on me increased significantly once we moved from on base to a newly built home off base in 2016, and this was also interfering with my ability to safely drive at night. I was increasingly being made to feel as if I was in some type of induced hypnotic state or as if I was being drugged and could hardly function as I once could. At one point, I began to develop severe symptoms while driving at night that made me aware of the fact that I was being subject to what is called dazzling that over time made me to permanently develop severe problems with my vision when I had 20/20 vision my entire life before

experiencing this after moving here. My experience with these lights is that they too are weaponized, since I never had any issue with this before, and this has led to permanent injury to my eyes. Increasingly, as I experienced a long list of what can really only be described as the effects of prolonged targeting with radio frequency devices, the lights included, I was growing desperate for a resolution to what began to feel like a complete and total body melt down and I began regularly seeking medical treatment when I had not done so at any of the military bases we had been assigned to previously. Mainly, in the past, I went only for the occasional breast cancer screening or Pap Smear and or OBGYN visits during pregnancy, but typically I was not visiting a physician regularly for my own personal health reasons until about the year 2017 time frame. This is when I began to seek answers on what was happening to me to which my doctors who were all enlisted in the military, it seemed to me, anyway, began to gaslight me looking for mental health explanations rather than to put my symptoms together with documented studies on the biological effects of prolonged exposure to frequency radiation and or non lethal weapons and things of that nature. I can only assume this was done to hide the fact that I was being used through legal mechanisms though this is being fielded in a very criminal fashion as a human research subject of non lethal weapons. It is my opinion that if a person presents with a list of chronic conditions that it should be considered if there may be some external

factors involved before reaching some conclusion that a person simply is overeating and obese or is in some way mentally ill.

With this in mind, it was by my own research that I came to conclude that I had developed the condition of oxidative stress over this long time period of chronic exposure, and this was because my regular physician even after I had been diagnosed with Hashimoto's thyroiditis still continued to treat me as if all my reports were simply the result of some primary condition of obesity that was an improper diagnosis by a different military provider that was never removed from the record when I sought treatment in Late June and July of 2013 when I found out I was actually pregnant with my twin children and it was not the product of a condition of Type 2 diabetes or obesity at all but the underlying development of oxidative stress. . I found that this all over body targeting is how I came to recognize what was occurring due to these combined experiences and the fact that this followed me from state to state that I believe is responsible for afflicting many different organ systems. I feel this could be the result of more than 27 years of persistent targeting of a very traumatic magnitude, but with intermittent results at times due possibly to various factors such as not being able to permeate the blood brain barrier perhaps that was while in the midst of only seeking treatments for these widespread conditions when symptoms presented that was then used in order to characterize me as having some type of mental

health condition such as Hypochondria or a Somatic disorder even as I carefully reported the symptoms as they developed and only in an effort to return my health for my own sake and the sake of my children. One symptom that presents with thyroid disorder for example, in particular, is the presentation of a goiter but also one of the most common ways of confirming a diagnosis is losing most of the hair on the eyebrows. This, is something I only came to notice when I had posed for a photo with one of my daughters that we took while outside when it was snowing that year, and she commented on it afterwards, that is also when I realized that I was in severely poor health. This I concluded when I noticed the very deep and dark circles under my eyes that I no longer have because of the methods I used to restore my health on my own while being under and remaining under severe targeting by this program. When I noticed that I no longer could even see my eyebrows in a photo, that is when I put it all together that I had at some point in time no longer had a need to shave my legs as well because of there no longer being any hair growth on my legs. It occurred to me at that point that these might be related, since I had also been losing hair in other parts of my body, this was not confined to hair loss and the loss of hair on my eyebrows. This began to happen first with my lower legs that were always freezing cold to the point that I no longer grow hair on my lower legs as a result of this experience. With the prolonged sensation of freezing cold being felt mainly in my lower legs from the area above the knee down to my feet. This

affected the appearance of my legs and made me to develop spider veins rather quickly and exactly in the area where I am most targeted from the knee downward. This was something that developed right away when I do not have a family history of these that I know of. I have been targeted to my legs for so long now that in about the year 2022 I think it was, a deep vein attack to both of my legs beginning in the hip area of my back on the right side led me to have what seems to be permanent neuropathy that after a long period of extreme debilitating pain this moved over onto my left side from above my ankle down to my feet and into my toes. A SMART Meter update that I only found out about sometime in the year 2021 time frame has led me to experience nightly pain to my legs after this initial incident occurred each summer over a two year period. A second SMART Meter upgrade came later on, the first one we received, I only noticed that we had already installed in the year 2021 during the Covid lockdowns that one was an iTron SMART METER made by Schneider Electric. This 5g SMART METER I feel along with a household modem -router that had also been updated and is possibly linked to nearby directed energy devices are all working in coordination with this synchronized system that includes different types of weaponry, drones and things of that nature. These combined have caused all kinds of home wiring and appliance damages along with various physical damages and even damages to our vehicles. We also have had so much experience with broken household items plugged

into our outlets that I could not really tell if this was from the SMART meter or something else as I mentioned in the above statements, this is not just one device but many devices are in deployment and relate to the fact that I am systematically being stalked and targeted with electronic assault and harassment to the point that I am made very much aware that this is being used for what seems to be asymmetric warfare purposes. This electronic assault has affected my phones and other electronics such as computers, cameras, televisions, gaming systems, streaming Plug and Play devices like Blu Ray players and the like, and even CD players and computer mouses plugged into our household computers and USB ports have been damaged and or broken before they should have been. A brand new microwave installed in our newly built home in 2016 led to a break that required an entirely new motherboard after only a week of living in this newly built house at that time, a stove also quickly needed repairing that made it so that I could no longer from that day forward program the digital clock on the stove panel. Many brand new appliances have led to replacements in less than two years time, many of which experienced leaking from the bottom of the appliance, dryers simply stop working not long after buying them.

Most of the symptoms I have had since I began to use wireless in the home as opposed to hard wired that we had used most of the time prior to moving to El Paso where we were very soon after moving into on base

housing led to believe there was no real affordable way to have hardwired internet service installed in the home, and we were soon after given a wireless modem and router at that point and from then on I attempted numerous times to find wired home internet services in our area and was informed at different times and by different providers that they do not offer this service in our area. From then on we would have wirelessly connected devices in the home with the pulsed radio frequency radiation and electromagnetic frequency effects increasing with each new introduction of this technology around us that combined with other possible causes as noted potentially by weaponized sources I would say have led to things like allergies, oxidative stress, chronic nutritional deficiencies, pre diabetes, heart pain and heart palpitations along with heart damages, sleep disorders, pins and needles, headaches, gastroenteritis, skin conditions, burning and heating sensation and sores on the skin, sometimes extreme stomach pains, sharp stinging needle like pains and stabs and manipulation to various parts of my body, sometimes severe pain to inner ears and behind the ears to the head that in my case have lead to significant hearing loss,other symptoms include pain,itching and twitching in my eyes, numbness and tingling and a feeling of pressure in the scalp, one thing that I began to notice while living at Fort Campbell in Kentucky from 2006-2009 was the Tinnitus ear ringing and pitching, this ear ringing and pitching was so painful and so disorienting for a time when this led me to experience a sensation of vertigo as if the room was

closing in on me and I felt the need to flee the area I was in but could not remember my way out due to this overwhelming feeling of disorientation. This was so debilitating that I could not remember my way out of buildings I had been in many times, and this experience followed me to our next duty station and led to persistent psychological trauma as I struggled to regain my cognitive and executive functions over a long period while I was being sadistically terrorized, sometimes stalked and then subjected to subliminal harassment by those involved in delivering this experimentation punishment. This symptom of developing memory loss along with this extreme form of disorienting tinnitus was somewhat unique to this military base, this did cause significant and lasting damage that followed me to different states we lived in when I would have a difficult time in similar buildings, but it was there at Fort Campbell that I felt that my memory had been wiped as the best way to describe it with my introduction to what is now a never ceasing and never ending day to day experience that took me a number of years to fully recover from this particular aspect after living at that base as our first active duty assignment when my ex husband had joined the military full time after being activated as a member of the National Guard. This was for about a four year time frame. This particular base has actively been connected with psychotronic weaponry use in the past, and it was there that I began to notice symptoms involving those types of things that eventually led me to report this not understanding at the time that my experiences were

not entirely health related but the result of weapons that came right along with the organized harassment from families in the community housing who were actively engaged in a well planned method of bullying and harassment that has never been dealt with in spite of my reports of some of their petty crimes against me. This was so organized that it had the intent to isolate me so that they could target me more precisely with these weapons, and because of my ignorance I had no defense at the time to what was being done to me.

Throughout my experience, I should point out that most of these health effects are largely in my opinion the result of my being selected for human subjects research though like I said this may have taken place for me at birth because I was born on the Fort Knox military base. These symptoms have been lifelong for me to a certain extant with symptoms indicating I may have been a subject of MKULTRA like experiments since my birth.

I do want to say that most who are being singled out as targets of this technology, not just those experiencing the symptoms from using wireless devices, I do want to make the very clear distinction that there are some effects that may be experienced by every person just from being around these devices and even the SMART Meter is said to engage in pulsed frequency radiation that has been noted to be taking place in thirty second intervals. This alone can contribute to some things though as I said, I

was having this experience long before I ever had any internet device in my home. And, I also had the experience of owning a wired computer several times in the early 1990s and did not experience these symptoms personally at that time, so I would not suggest that this is in any way connected to the mere use of these devices. I did not have this experience around computers we used in school in the 1980s that I recall, so I am not making any blanket statements with regards to all technology in general just to provide my experiences and how this led me to develop oxidative stress from prolonged exposure to radio frequency and other frequency technologies that I came to conclude involved being used for this research that has the combined use of a punishment and or retaliation system..

I have also had some experiences that I know most being targeted have also experienced and my testimony is similar to theirs in this regard. I am referring to the testimonies from targeted individuals who have stated that their children are also being stalked and harassed and that they too are having remote neural monitoring being used on them, along with potentially anti personnel, behavior effects, directed energy, limited effects, less lethal or less than lethal, non lethal, and or mind control weapons being used on them. This would entail all the effects of non lethal weapons technologies, and the different names associated with them that has also included various types

of criminal assaults to my body that I have realized have also been done to our children and pets.

I would like to point out that I have experienced many things that I have not detailed in this comment that are difficult at times to detail some are difficult to fully articulate and sometimes as time goes on this has the effect of leaving from my mind but the very first time I was placed under heavy attack was while living at Fort Campbell, this also initially involved timed entry exit harassment from the nearby Fire Department on base. This has continued throughout my targeting and I have since learned they are like other emergency responders involved in this targeting program unfortunately that is a reality for most people experiencing this. I know that they do receive significant government contracts for emergency preparedness, and I have confronted several of these fire stations about this malicious stalking harassment that may also involve drone stalking and radio frequency assaults, I have received directed energy hits from emergency and other vehicles and all sorts of aircraft. I am also everyday being terrorized by a malicious Constable across the street from me who also seems to be in charge of the different theatrical skits involved in this harassment that usually involve props and efforts to agitate and anger, he seems to organize a large group of people who stalk me in public and carry out these various acts of sabotage on my person, most of these are planned in advance and they are forced upon me to participate in them. These are

crimes that are being allowed to occur on a single female and mother of five children who is economically targeted, and this has also involved sadistic radio frequency abuses, remotely carried out sexual assaults and sexual stimulation much of which leads to damages to those areas..

The formatting for the references I am going to provide to illustrate and or prove the points being made about my experience and contained herein will be as follows: I will attempt to first show acknowledgement in some way of the pathways and pipelines for the advancement of a system that was always intended for use by military for weaponry purposes and has been developed primarily for dual uses a method for the lucrative experimentation of this technology essentially that has been known for many decades to cause a long list of negative health effects even without directing it for weapons purposes that has not necessarily just been limited to the military users but also experienced by those who were in and around the weapons technology during field testing.

I will also try to show Congressional and or Governmental agency knowledge of these findings when possible, I will then provide evidence in the way of patents, corporations and organizations which have profited from this research quite often, as noted by Senator John Glenn while presenting his proposal for the Human Research Subject Protection Act of 1997, without disclosing to the individuals

that they are likely being used as the test subjects even as they are lured into using such products which are simultaneously at the same time being used to advance certain hidden but widely known by those in the know as technological or weapons capabilities for warfare and for the purposes other than warfare as mentioned above and throughout this comment like Apple had done with its EarPods for instance or how GM Global Technology also obtained a patent that was not being disclosed that would harvest and store human energy while inside of the vehicle. Even gaming devices like Microsoft's XBOX or Nintendo gaming devices have published an ability to read and write to brain waves and is not being disclosed to the unaware consumer.The same type of situation has taken place with the use of this exact same capability for accessing human beings for their energy potential relating to vehicle tires and tire sensors linked to the Tire Pressure Monitoring System that can easily be connected to satellites and manipulated from remote locations. Most of this knowledge is known by all the so called inventors, owners or proprietors of these technologies.

As an example, IBM, when Microsoft obtained its first Wireless Body Networking patent stated that they had known for a long time that this wireless body network data transfer capability was possible but admitted they did not think it was conceivable to get a patent for that because this was not supposed to be possible to hold a patent of ownership over anything biological that exists in the

natural environment and is obviously the reason why we cannot obtain a patent for the air that we breathe or the water that we drink. But, this shows there has been a long standing criminality that has creeped into our systems including our United States Postal Office, the USPTO, for this to have been allowed to take place at all requires an investigation. A short list of references to show what I am referring to:

https://www.theguardian.com/science/2004/jul/06/sciencenews.microsoft
https://nij.ojp.gov/library/publications/biometric-identity-based-intra-body-communication-channel-characteristics-and
Personal Telemetry Using Wireless Body Area Networks
https://nij.ojp.gov/funding/awards/2016-r2-cx-0014

— I will show that the results of this ongoing testing have either been known to allow for decades of advanced undisclosed research on the subjects or have since been found to allow that capability often with a number of negative consequences to the individuals without their knowledge or consent and or that the current effects and capabilities with no disclosure are allowing for an extreme level of prolonged distress or duress sometimes with the sudden onset of or the appearance of various disease like symptoms, and combined with sometimes immediate and prolonged psychological, physiological, and economically

traumatic situations for some people mostly for the financial benefit of the individual entity, corporation or organization in question and with no real compensation being given to the unsuspecting users. Consider this quote from a University of California San Diego patent

Numerous less-than-lethal conventional systems have been developed to influence or control the behavior of ***target*** *subjects without requiring physical contact with the subject. Examples include* ***directing high intensity sounds toward the subjects, exposing the subjects to strobe lights at particular frequencies, directing highly directional ultrasonic waves toward the subjects, and the like****. While each of these systems have performed with some success, they generally suffer from the fact that the subject becomes quickly aware that some outside influence is causing him or her distress. For example, the use of audible sound or light provides immediately alerts the subject of an issue. The subject can take evasive action by simply blocking or protecting his or her hearing or vision. (*USCD, Systems and methods for covertly creating adverse health effects in subjects, 01 10 2023).

For everyone using or working in or around these now fully integrated wireless technologies, the same network as I have said and is thoroughly documented is also a military weaponized network system that is as we know from evidence highly advanced and is capable of quickly and without any accountability of inflicting great harm to

humanity and to the environment, and because the FCC is mostly the gatekeeper of the safety guidelines for wireless that have not been updated all this time, there is also no open disclosure happening. Its weaponized delivery capability and handheld devices are intentionally kept hidden from the public understanding and are now reportedly in widespread use by criminals and opportunists in communities nationally and globally and this is not being acknowledged or punished by those governments.

This is of course also related to global UN agendas whose various architectures detailed in the SMART City plans like the DATA centers are rendering its intended climate outcomes null and void. There are also those who are explicitly being used as lucrative test subjects for many dual uses as part of this agenda amounting to contracted human trafficking and who are also being targeted by covert means for any whistleblowing they may be doing all being delivered by a very well established and seemingly highly resourced militarized punishment system, which is-used intentionally and without informed knowledge or consent for the purposes of what seems to be as suggested by many a corporate government contracted trafficking program to create lifelong, non consensual, subjects of this type of research and not having to compensate those persons while they are being severely used and abused, sometimes leading to a long list of damages.

There are what seems to be intentional forms of trauma based abuses that go along with this experimentation program, which are being inflicted without end perhaps in order to better facilitate highly advanced and sophisticated forms of so called emerging, non lethal, less than lethal, no touch, neuro- cognitive and or asymmetric warfare, slow kill methods simultaneously appearing in advanced weapons systems literature, in medical and psychological documents and leading to patents like the one mentioned above including details of many of the effects normally listed in psychotronic. radio frequency and or microwave weaponry that are used for things such as to conduct dream manipulation, remote viewing, thought reading, remote interrogations, active denial, anti personnel, etc., and to a large extant to covertly facilitate things such as the Neuralink hive minds for collective mind control manipulation purposes along with a form of synthetic telepathic communication that is on record in military documents going back to the 1960's time frame admitting that to arrive at such states of collective telepathic communication that the group or the collective would have to endure a highly stressful traumatic event. To achieve this system globally would requite a massive traumatizing event to take place continuously seems to be what is proposed by this. Many of these so called civilian themed products are also being simultaneously used in military intelligence for many dual use purposes with none of the

tangible benefits going to the consumers or civilian population in general.

In lieu of the following information based upon various experiences complaints and reports from people around the globe including myself now ongoing for more than 27 years I begin by showing a well known Congressional bill put forth by Dennis Kucinich many years ago known as ….

The **Space Preservation Act of 2001** that clearly spells out a history of Congressional Knowledge on emerging technologies and weapons including those in space defined in the act as:

In this Act:
(1) The term `space' means all space extending upward from an altitude greater than 60 kilometers above the surface of the earth and any celestial body in such space.
(2)(A) The terms `weapon' and `weapons system' mean a device capable of any of the following:
(i) Damaging or destroying an object (whether in outer space, in the atmosphere, or on earth) by--
(I) firing one or more projectiles to collide with that object;
(II) detonating one or more explosive devices in close proximity to that object;
(III) **directing a source of energy** (including **molecular** or **atomic energy, subatomic particle beams, electromagnetic radiation, plasma, or extremely low**

frequency (ELF) or ultra low frequency (ULF) energy radiation) against that object; or
(IV) any other unacknowledged or as yet undeveloped means.
(ii) **Inflicting death or injury on, or damaging or destroying, a person (or the biological life, bodily health, mental health, or physical and economic well-being of a person)**--
(I) through the use of any of the means described in clause (i) or subparagraph (B);
(II) through the use of **land-based, sea-based, or space-based systems using radiation, electromagnetic, psychotronic, sonic, laser, or other energies directed at individual persons or targeted populations for the purpose of information war, mood management, or mind control of such persons or populations;** or
(III) by expelling chemical or biological agents in the vicinity of a person.
(B) Such terms include exotic weapons systems such as--
(i) **electronic, psychotronic, or information weapons;**
(ii) chemtrails;
(iii) **high altitude ultra low frequency weapons systems;**
(iv) plasma, electromagnetic, sonic, or ultrasonic weapons;
(v) laser weapons systems;
(vi) strategic, theater, tactical, or extraterrestrial weapons; and

(vii) chemical, biological, environmental, climate, or tectonic weapons.
(C) The term `exotic weapons systems' includes weapons designed to damage space or natural ecosystems (such as the **ionosphere and upper atmosphere)** or climate, weather, and tectonic systems with the purpose of inducing damage or destruction upon a target population or region on earth or in space.

—The existence of this act before Congress on its own should prove Congressional and or Congressional Committee knowledge on all the hereto mentioned capabilities for a weapons based technological system that now have also been placed in the hands of civilians who will never have their full rights afforded to them while they are using this technology because it was always owned by the government and military who keeps such knowledge hidden blocking all those experiencing the effects seeking redress or who are being used as subjects and are being targeted from ever being able to receive any justice or remedy. This also allows those entities to conduct themselves freely however they may feel necessary for the preservation of that entity and its so called safety and security.

—Likewise, the following references and resources that is by no means a full list will hopefully illustrate the immediate requirement for rigorous regulation, reform, and or a complete and immediate cessation of the accelerated

deployment of these systems seemingly taking place without any meaningful or purposeful regulated constraints. There certainly does not appear to have been much willing restraint taken by those involved who are entirely the ones to benefit from its undisturbed employment on segments of the population or upon the population at large.

—-Essentially the public has been knowingly lured into an unregulated development program for military dual uses of weaponized technological deployment and outright employment of collective research with no disclosure and or selective test subject seeking in many instances as noted by various target selection programs in use by those like Jeffrey Epstein and the Maxwell family under such names as the PROMIS or Main Core software programs connected to Non Lethal Weapons research and other projects at national laboratories, speaks of ongoing experimentation or use of this sophisticated military controlled or derived technology upon the civilian population that is now fully integrated into every aspect of our lives including in academic institutions, philanthropic organizations, agencies of public health and intending toward a friction free biometric and bio-sensing - bio digital convergence capable of killing on demand without confinement or restraint and has led to an atmospherically capable command- control environment that is a clearly well established globally delivered military Kill Box weapon system allowing selfish and or sadistic opportunists to

profit greatly from this while simultaneously developing ever more complex weapon systems for many import and export dual use purposes.

Why Is No One Talking About the Fact That Ghislaine Maxwell's Eldest Sisters Built Tech Surveillance Infrastructure for U.S. and Israeli Intelligence?
https://alisav.substack.com/p/why-is-no-one-talking-about-the-fact
https://www.sgtreport.com/2023/04/robert-maxwell-goes-to-texas-the-story-of-bluebonnet-part-1/
https://www.sgtreport.com/2023/04/robert-maxwell-goes-to-texas-the-story-of-bluebonnet-part-2/

Those involved in government who developed this pipeline for a list of assorted reasons maybe were shockingly doing so with aid from the likes of Jeffrey Epstein and the Maxwell family as noted making full use of a highly organized predatory network that they had essentially worked for decades to establish having done so seemingly in unaccounted for but proven to be criminal ways due to their links to multiple covert intelligence agencies like the CIA, FBI, MI5 and MI6 or MOSSAD while also engaged in the ongoing process of granting or obtaining a long list of contracts, grants and or leading to suspect public private patents doing so also in a manner consistent with criminality while giving the appearance of legality hiding behind DOJ and NIJ and with intent of

advancing and blurring the lines between military networks and civilian communication networks.

This is happening at such a steadfast pace to the point of down right sinister evil doing, especially since the takeover of the USPTO by the heavily funded and infiltrative British SERCO corporation, and most certainly this has advanced significantly, since Bill Gates was first given a position in the federal government during the all important years of 1999-2000 to the, back then, newly created National Infrastructure Assurance Council NIAC in the year 1999 as shown below and along with the creation of INQTEL that same year. DARPA admits these efforts facilitated by former President Bill Clinton created what is now known as the term “Dual Use.” This policy is responsible for advancing the non consensual human research subject for national security purpose and why no person who is being used for dual use research can ever seek and redress.

The Federal Register for the creation of the National Infrastructure Assurance Council, the same year as noted that INQTEL was created in 1999, and the same year DARPA sent its SMART DUST project to UC Berkeley from 1999-2001. There were a slew of patents for the military Kill Box that were granted, such as the numerous patents obtained for the FAA PFN TRAC that was likely many years of technological development in the making to arrive at completion.

https://www.merriam-webster.com/dictionary/wet%20ware

The **FAA PFN TRAC patent granted to Richard C. Walker in 2001-2002 outlined in the above article detailing the patent's capabilities and its prior art patent citations including for the vehicle kill switch**

along with capability for monitoring and thought reading while referring to those using the system and being monitored by federal agencies as "wet ware" has also been privatized in places like Costco, Sam's Club, Target and Walmart stores: https://patents.google.com/patent/US6965816B2/en

The following is possibly the prior art patent described on page 23 in the illustrations of the FAA's PFN TRAC patent granted to Richard C. Walker to allow for the full remote control access of any vehicle along the lines of satellite GPS and or Onstar, a Kill Switch capability…basically, and not disclosed as such to the vehicle user that was clearly stated in this patent would synchronize with sensors and satellites allowing for disabling and coordinating of monitoring efforts with police, federal agencies, etc. never disclosed in its entirety as to the full nature of this system concerning the wireless technological and satellite capabilities, which would facilitate this and that could potentially cause bodily and other harms to those persons even without being weaponized against them in any fashion.

And, **DARPA** has its very own **Biological** Technologies Office
https://www.darpa.mil/about/offices/bto

(Evidence outlined in the Biological Radio Communications document came from the Air Force Systems Command in 1963 suggesting well known and widespread knowledge existed at that time of significant biological effects of frequency based technologies used primarily by militaries along with academic and scientific communities, so much so that they were studying the notion of **synthetic telepathy** already at this time period in

Kyiv and noting the immediate effects on hearing and vision while accessing the nervous system for complete body and mind manipulation, etc.). This corresponded with Dr. Jose Delgado's resulting findings that no electrode, implant or wiring was needed for this to be made possible to do.

Review of concepts, quantities, units and terminology for **non-ionizing radiation NIR** protection. INIRC. Health Physics 49 (6): 1329-1362; 1985.

Non-Thermal Effects of RF Electromagnetic Fields. Proceedings of the International Seminar on Biological Effects of Non-Thermal Pulsed and Amplitude Modulated RF Electromagnetic Fields and Related Health Risks, Munich, Germany, November 20-21, 1996. Munich: International Commission on Non-Ionizing Radiation Protection; 1997.

Johnston, Sheila A.. "**Behavioral and Cognitive Effects of MW Electromagnetic Field Exposures**." Piers Online 3 (2007): 751-758.

Systematic review of human experimental studies on health effects of static, low frequency and intermediate frequency electric and magnetic fields: https://www.crd.york.ac.uk/PROSPERO/view/CRD42025643837

The IAFF is investigating funding for a U.S. and Canadian study that would characterize exposures from RF/MW radiation in fire houses with and without cellular antennae,

and examine the health status of the fire fighters as a function of their assignment in exposed or unexposed fire houses. Specifically, there is concern for the effects of radio frequency radiation on the central nervous system (CNS) and the immune system, as well as other metabolic effects observed in preliminary studies. (Taken from the International Association of Firefighters article linked below).

From the Microwave Injured Veterans Network:

"The potential for exposure to ionizing radiation when working near some radar systems does exist." -USAF Master Radiation Exposure Registry (MRER)

https://www.publichealth.va.gov/exposures/radiation/benefits/registry-exam.asp

Secondary Rays from Metals on and Inside of the Body (a.k.a Amplified Stimulated Emission or Re-radiation): Other sources of injury include secondary ray reflection from dental fillings. A 1972 Navy study highlighted the fact that dental filling sparking could cause injury. Each one of the secondary rays depicted in this image has its own inverse square law from the dental filling outward. NMRI p11, Q, 1.

"Exposure to radiofrequency radiation (RF) non-ionizing radiation may cause bodily injury (e.g. burns)

under exceptional circumstances. Cardiac pace makers may be affected. Note, this was primarily a risk while in close proximity to the antenna and the antenna coupler area during active signal transmission (Also see, Gaily 1987)"
Loran Report, 2011. Defense Threat Reduction Agency (DTRA), p12.

https://magdahavas.com/from-zorys-archive/pick-of-the-week-12-why-pulsed-microwave-frequencies-are-more-harmful/

0.95 and 2.45 GHz are the most Lethal Microwave Frequencies. So.,,,..,….

Why are we using some of the most lethal microwave frequencies for WiFi and digital cordless phones?

Polson, P, DCL Jones, A Karp, and JS Krebs. 1974. Mortality in rats exposed to CW microwave radiation at 0.95, 2.45, 4.54, and 7.44 GHz. Final Technical Report Prepared for U.S. Army Mobility Equipment Research and Development Center, Fort Belvoir, Virginia, Contract DAAK02-73-C-0453. 105 pp.

More than 2000 Documents prior to 1972 were included in Zory Glaser's reports on Bioeffects of Radio Frequency Radiation.

Glaser, Z.R. 1971/72. Bibliography of reported biological phenomena ('effects') and clinical manifestations attributed to microwave and radio-frequency radiation. Naval Medical Research Institute MF12.54.015-004B, Report No. 2, revised. 106 pp. [NOTE: this document was shorted to 25 pages so we could post it here and does not contain all the 2311 references.]

Adams, R.L. and R.A. Williams. 1976. Biological Effects of Electromagnetic Radiation (Radiowaves and Microwaves) – Eurasian Communist Countries (U). Prepared by U.S. Army Medical Intelligence and Information Agency Office of the Surgeon General and was released by the Defense Intelligence Agency. 34 pp. Unclassified.

Steneck, NH, HJ Cook, AJ Vander and GL Kane. 1980. The Origins of U.S. Safety Standards for Microwave Radiation. Science, Vol. 208, 13 June 1980.

A sister article, published the same year by the same authors, is worth reading: **"Early Research on the Biological Effects of Microwave Radiation: 1940-1960."** Cook et al. 1980. Annals of Science 37: 323-351.

Also From Dr. Magda Havas: **SIGNIFICANCE of the Glaser research . . .**

The value of the Glaser 1972 document is to counter the statements that "credible" research does not exist showing non-thermal effects. This is a false statement promoted by those who are either unaware of the literature or unwilling to admit this radiation, at levels to which we are currently exposed, can be harmful.

Credible research does exist; it has been around for decades; and it has been largely ignored by those responsible for public and occupational health. Deleterious effects noted in other early studies…

Some of the deleterious effects resulting from microwave exposure available to those establishing the standards included:

1926-39, effects of ultrashort wave radiation on malignant tumors in mice
1930, changes in blood counts at 13 mW/cm2
1932, attenuation of bacterial toxins
1932, brain responses at 12 to 74 mW/cm2
1935, effects of condenser fields on flies, rats, and mice
1943, Daily reported a statistically significant increase in the concentration of immature red blood cells in exposed workers and a high incidence of headaches
1948, research at the Mayo Clinic reported cataract formation in dogs
1948, research at the University of Iowa showed cataracts and testicular degeneration in dogs

1953, radar workers reported ill effects (internal bleeding, leukemia, cataracts, headaches, brain tumors, heart conditions and jaundice)
1956, testicular damage in rats at 5 to 10 mW/cm2

—Military advancement into academic and public health systems indicates possible non consensual human subjects research is and was being conducted using executive orders, Memoranda of Understandings, grants and contracts for research without disclosure and without gaining a full and informed consent, now leading to massive widely distributed publications of this potential research assuredly for the promise of prolonged revenue streams all while being described as the product of voluntary human research having helped fuel these significant advancements with no publication available to the public at large to be able to verify these so called voluntary research participants. No informed consent documentation is easily available in the government records making the public to conclude these do not exist and verifying to those reporting on the effects of this technology that they may in fact verifiably be

governmental non consensual human research subjects for many dual use public private contracts:

Mead Data Central, Inc. v. United States Department of the Air Force: Extending the FOIA's Fifth Exemption, 19 Wm. & Mary L. Rev. 343 (1977), https://scholarship.law.wm.edu/wmlr/vol19/iss2/8

DARPA's **RadioBio: What role does electromagnetic signaling have in biological systems?** https://www.darpa.mil/news/2017/radiobio

https://www.crfs.com/blog/radio-direction-finding-techniques-and-applications-for-ew-and-sigint

DARPA's **SMART DUST** project out of UC Berkeley in 1999-2001….Implantable "**Neural Dust**" Enables Precise Wireless Recording of Nerve Activity: https://www.darpa.mil/news/2016/implantable-neural-dust

As noted by Kristofer Pister in the **DARPA SMART DUST** project summary at UC Berkeley…
We're funded by DARPA, so we will demonstrate Smart Dust with one or more applications of military relevance. In addition, we're pursuing several different applications with commercial importance, and we've got a long list of applications to work on if we only had the time. Here's a sampling of some possible applications, in no particular order:

Defense-related sensor networks and the FAA PFN TRAC Kill Box are one and the same:

battlefield surveillance, treaty monitoring, transportation monitoring, scud hunting, …(https://people.eecs.berkeley.edu/~pister/SmartDust/).

https://www.crfs.com/blog/radio-direction-finding-techniques-and-applications-for-ew-and-sigint

Exactly 13 years after the above DARPA SMART DUST project was established and completed, the NIH under President Barack Obama took over the DARPA DOD **BRAIN Alliance for the BRAIN Initiative**, An article then appears in the private sector telling us about SMART DUST capability for covert non invasive neuro monitoring surveillance at the same exact moment that Elon Musk announces his own advancements with his supposed invention- Neuralink: https://www.extremetech.com/extreme/161525-smart-neural-dust-could-carry-sensors-deep-into-the-human-brain-send-data-back-out

A direct quote from the 2013 article above published on Extreme Tech states **DARPA's SMART DUST** is proposed to be *non invasive* (N3, TNT) and can be simply "sprinkled" over your head from above to allow for this covert and sophisticated **neural monitoring** to occur….

"*You can't do science without data, and a team at Berkeley has proposed a method to get a lot more data about the*

brain. All they need to do is sprinkle your brain with tiny dust-like sensors" (https://www.extremetech.com/extreme/161525-smart-neural-dust-could-carry-sensors-deep-into-the-human-brain-send-data-back-out).

And, showing their intent has been for decades to penetrate the blood brain barrier to be able to find ways of permanently gaining entry into brains: https://wyss.harvard.edu/collaboration/brain-targeting-program/

Telling without telling what is really the goal:
The Wyss Brain Targeting Program is expanding its "neural network" https://wyss.harvard.edu/news/the-wyss-brain-targeting-program-is-expanding-its-neural-network/

DARPA advances or rather simply deploys its **Neural Dust**, or **SMART DUST** project to its highly developed **BRAIN** machine interfaces and right alongside this project, a certain number of people had been for years reporting a long list of symptoms to various agencies that would seem to indicate a widespread non consensual research program had been secretly under development while many of those afflicted all systematically report such things as tinnitus and hearing problems leading to hearing loss, memory loss, hair loss, blisters, lesions, rashes, and sores, vision problems, cascading widespread all over

body disorders, chronic and ever changing unexplained health concerns leading to persistent health problems with no known family history and often with no way of being provided with proper healthcare services and or insurance claims, thought reading, remote neural monitoring, dream manipulation and sleep disturbances, organized stalking and harassment, entrapment and sabotage schemes, false reporting to federal agencies are used in a systematic effort at creating false dossiers and false criminal narratives, in some cases there are reports of staged vehicular accidents and other damages, employment and other types of mobbing such as real estate mobbing, financial sabotage and much much more are some other experiences that have been reported across the board by these persons. Meanwhile….there has been various treaties and bans like those listed in the Space Preservation Act of 2001 not just on space based weapons but also on the very weapons being fielded and highly suspected of employing the use of space based mechanisms such as satellites for their deployment and employment, their exportation and importation.

FCC Federal Register Medical Body Area Network 2009 details an open comment discussion on using the same network for public health that the military uses: https://www.federalregister.gov/documents/2009/08/06/E9-18859/medical-body-area-network-mban

..And now the medical body area network has fully deployed using undisclosed aspects of pervasive wireless sensing frequency based technology systems and is employing potentially even more harmful technology to include various types of known to be carcinogenic heavy metal nanotechnologies interacting in such manner intending to be friction free in ways accessing and interacting at all times with all human beings electronically and without any significant or

meaningful safety guideline testing and all without disclosing this to the communities in which they are being administered, I also refer to the use of advanced heavy metals like graphene oxide, reduced graphene and graphene nanotechnologies that appear to be in use without disclosure in most medical systems today.

—-Heavy metals in air food soil and water suggests extreme dispersal into the atmosphere greatly magnifying the effects of wireless technologies, this is now ending up

in samples of the soil and water; an abundance of evidence to show oxidative stress from the combination of heavy metal toxicity and the combined use of heavy metals has now advanced to toxicity from a pervasive wireless graphene nanotechnology that is also unregulated and we are to believe is essentially safe for widespread use in public health areas now also being found in injectables and is a very real health danger not being openly discussed though evidence was available that graphene in the body is a known cytotoxin suspect neurotoxin like Fluoride capable of permeating the blood brain barrier. The dental practice does not appear to be regulated but only provides assurance of compliance with various industry organization standards and does not appear to be regulated or required to disclose to the consumers the contents of its products and services even though this is a potential danger, hazard and or a public health threat to all and especially children:
