RE: Moshe Shafrir
13825 Village Avenue
Healdsburg, CA 95448

To Whom it May Concern:

I am a board-certified Internal Medicine physician licensed in New Mexico and Florida. Moshe Shafrir requested an appointment with me as a subject matter expert in the field of Electromagnetic Field (EMF) Associated Illness. I was Course Director/Instructor of Record for the international EMF Medical Conference in 2021 and currently teach and peer review in areas of medicine applicable to Moshe's case.

Moshe carries a diagnosis of Overexposure to Non-ionizing Radiation, sequelae (ICD10 W90.8XXA) – commonly referred to as electromagnetic hypersensitivity (EHS) and referred to in the older medical literature as Microwave Syndrome. For purposes of this letter "Overexposure to Microwave Radiation," Microwave Syndrome and Electromagnetic Hypersensitivity (EHS) are interchangeable.

For Moshe, EHS is a disabling condition. Exposure to RF-EMF (radiofrequency electromagnetic radiation) causes him impairment that substantially limits multiple major life activities. These impaired major life activities include working, concentrating and sleeping. Additionally, major bodily functions are affected, which include disturbances of the neurologic and genitourinary system. The impairment is absent if Moshe spends time in a low RF-EMF environment. For example, in his home, no wireless devices are used; all are hardwired. The low-intensity RF-EMF radiation from neighboring buildings hinders his ability to sleep, and he must use a protective bed canopy to prevent insomnia.

2019 Galisteo St., N10C, Santa Fe, NM 87505

505.365.2482

When he is inadvertently exposed, the symptoms and level of impairment correlate with the duration and intensity of the RF-EMF exposure: The greater the exposure, the greater his impairment.

It is my opinion that Moshe requires accommodation from his utility companies to ensure that his home environment will remain low EMF. The accommodations shall include preventing the placement of wireless devices and smart meters near his home and on the street where he lives, as he will be significantly disabled if wireless devices and smart meters were placed near his home and on the street where he lives. Additionally, Moshe Shafrir requires accommodation in public places where wireless devices are used.

In keeping with the Americans with Disabilities Act (ADA), that ensures equal access to services for Americans with disabilities, I am counting on you to provide Moshe with the medically necessary and reasonable medical accommodation requested above. Specifically, to not require him to have an RF-EMF emitting meter placed on or near his property as a condition for continued access to water.

Thank you in advance for taking care of this urgent matter

Sincerely,

Sharon Goldberg, MD
