State: Arkansas

Name: Wilene Faught

Occupation: Retired House Wife

Wireless Health Effects: Headaches, dizziness, fainting, blackout spells, pain in old injury sites, rapid heartbeat, chest pain, memory problems, confusion. In 2002 I passed out and broke both my legs and had to get stainless steel rods put in during the surgery the wireless caused me to have arterial fibrillation, which I still have. The metal rods in my legs caused me to get lymphoma. I've been experiencing symptoms from electromagnetic fields for the past 16 to 17 years.

Wireless technology has affected my life: I have made adjustments to my home. I rewired my entire house. I paid money to rewire boxes near the street. I am limited to the hotels where I can stay. I had to stay in a hotel with Wi-Fi and I passed out. I went to a hotel that was located next to a city power station I had to quickly leave and switch hotels because of severe symptoms. I've had to switch rooms in a hotel because my room was located near the air conditioning system and it caused me a lot of symptoms. I can feel a cell tower before I see it. I've had to move motels because of symptoms I got from a nearby cell tower. Family members have to turn off their cell phones when I'm around or I will get a severe headache. There are family members that don't believe me and put me down.

Concerns for 5G: Please understand that this is harming people's health, not just people with electrosensitivity; it is harming everyone. This radiation is not natural for the human body, it is not a frequency found in nature. Please examine thoroughly the medical and scientific evidence before making any decisions to expand this further.

Respectfully,
Wilene Faught
2121 Bridger Rd.
Jonesboro, AR 72401
