State: Alaska Year born: 1959

Age when started experiencing symptoms: 48

Types of Injury: Electromagnetic sensitivity

Types of Injury:

To which wireless device do you attribute your condition? cell phone, Wi-Fi, Routers, Other
Xantrex inverter (it turns DC electricity for a battery bank to AC electricity).

What symptoms do you experience when you are exposed to radiation? : Fog brain, sharp stabbing pain at area cell phone is, or when using cell phone, from being too close to inverter or routers. Sores on fingers when I use the iPad too much. Depression when on Internet any length of time. Less sleep. Anxiety.

How did becoming injured by wireless affect your life? (Your family, living situation, education, job & financial and ability to function in society): Now I need to keep away from anyplace that has a router for wifi, can't be on cell phone any length of time, can't do most jobs because of the emf fields everywhere, stay home a lot, have to turn off all the power circuits, AC and DC, when not In use at home. Am unemployed most of the time. Can't figure out how to make a living and avoid exposure to emf fields. Family strain from not be able to work much. Can't move most places as wifi is everywhere from neighbors homes, etc, can't be public library or schools long cause of the wifi and cell phones.

How did you make the connection between the symptoms you were experiencing and wireless radiation? : I live off grid and have an inverter to make the electricity from the battery bank AC from DC. I started noticing whenever the inverter was on I would start to feel agitated. I knew it was causing it but didn't know what it was called and how to research it, I finally aft years of googling it found out about emf field and how people are getting sick from it, so I installed DC circuits to avoid the inverter use as now I'm so sensitized to it I can't be around it at all, not even cell phones or routers or wifi. By not knowing of the dangers of overexposure I continued to use the inverter which put out dirty electricity, and wifi and cell phone, which sensitized me more and more to it. If I had information on the dangers earlier I could have possibly prevented becoming so sentinel to it.

What else would you like to tell the public and public officials? : Inverters need to be made safer to use, possibly by requiring in DNA line filters with inverter use. Supposedly that cleans up most of the dirty electricity on inverters, also now people who are on grid use them for solar power and then the dirty electricity travels to all the neighbors homes, so in line DNA filters need to be law for any on grid solar inverter use. The filters are installed between the inverter and electric panel.
Wifi and routers should not be allowed in public places or schools, etc.

Additional Comments: Numerous studies show undeniable proof that cell phones, wifi, dirty electricity are the biggest health threat we are facing, but there is so much money in this industry, politicians accept donations from these industries that everyone prefers to look the other way. Many illnesses may be caused or made worse by emf fields but are blamed on other causes. I hope people become more informed to the dangers of it and how many people are getting so sensitized to it that they cannot fully function in society anymore because of its effects on their health.
