State: Arizona

Name: Linda Becker

Occupation: My name is Linda Becker. I am a graduate of Arizona State University with a Bachelors Degree in Management. I have been a Licensed and Certified Massage Therapist for the past 28-years. I own my own business, I own my home, I am a financially contributing member of this great State of Arizona

Wireless Health Effects: On May 15, 2012, I purchased a home in South Scottsdale. The home was built in 1963, and had a most unusual placement of the electrical meter. It was literally inside the house in a built-in enclosure inside the laundry room. When I bought the house, I thought the placement of the meter was unusual but it was not a deterrent to the purchase. I moved into the house on May 29, 2012.

Approximately four weeks after I moved in, I started having inflamed, red, welted, itching patches on my forehead at the hairline. I attributed it to a possible reaction to something I had eaten or something in the house. As 2012 progress, so did the inflamed, red, welted patches, only now they were tingling, burning, itching and flaking. They were now on a large part of my face and neck (I have chronological photos which show all this). In December, 2012, I decided it would be prudent to get a medical opinion, which I did. I was surprised at the diagnosis: electromagnetic sensitivity (EMF sensitivity or also known as EMS). I had not ever heard of this so, not only was I surprised at the diagnosis, I totally discounted it.

From December 2012, to April 2013, I bought and used a large assortment of skin care and dermatological products to remedy the skin condition; nothing worked.

In April 2013, I had a complete blood panel analysis done. When the physician discussed the finding with me he said, "your numbers are so good, you're going to live to be 100, but, the markers for inflammation in the body are high; your body is fighting some kind of inflammation." At the time, the inflamed, red welting, burning, itching and flaking covered almost my entire face, neck, chest and inside arm creases. The condition continued to exacerbate to the point that when I was around any wireless device, I could feel my skin literally starting to burn. I also had very erratic sleep patterns and now was experiencing erratic heart beats and I could hear the sound of the signal. Currently, my body reacts when going into any building that has wireless technology,

All the reading and research I have done, along with keeping track of my reactions to wireless radiation led me to the decision that I needed to limit my exposure as much as possible. To that end, I had my smart meter removed and replaced with a clock-faced meter. I have a hard wired computer, a landline telephone and have also made a number of other adjustments in my home and at work to limit exposure. My body has never returned to the condition it was before I experienced the EMF overexposure. I have also spent close to $10,000 trying to find ways to mitigate wireless signal exposure.

Wireless technology has affected my life*:* I know what this unchecked proliferation of radiation has done and is doing to my body. I have both visible and unseen breakdown of my body's ability to cope with this billions of times greater radiation that is currently a part of this planet. Quite probably, those of us who are affected are the canaries in the coalmine.

I read recently that Governor Ducey has said he wants to make Arizona the first "fully connected state in the country". To that end he signed legislation making it easier for 5G to come first to Phoenix. I am currently researching where I can move to get away from what will most likely create a painful end to my life (I have lived in Phoenix for 43-years). I can't imagine how the politicians who have been elected to look out for the welfare of this country (which just so happens to include people), continue to look the other way or given their blessings to technology that has never been biologically tested for resulting effects on life forms of this planet.

Concerns for 5G: There will be significant negative biological side effects if 5G high frequency antennas are installed in this state and especially in the Phoenix area because of the growing population and the number of high tech industries that are coming here. These effects will be felt by humans, animal and plant-life and we will see health care costs go through the roof. How do I know others will be affected? I know this because of how it's affected my body and my life. I don't need a scientific study that is done in a laboratory to tell me what's happening in my own body and as I've said, those of us who currently are having health issues are the canaries in the coalmine. Health care already is about 25% of GDP. When a new stressor of the magnitude of 5G is added to the mix, health care costs will eventually bankrupt this country.
