Testimony Against Mandatory Implementation of G5 Technology

January 17, 2018

To Whom It May Concern

I am a 79-years-old woman, married with three children, and hypersensitive to electromagnetic radiation. I have a doctorate in physics and taught at Pima Community College for ten years.

Things like fluorescent lights, cell phone towers, and extended computer use have bothered me for years. My health got dramatically worse in 2010, when Tucson Electric Power started replacing analog meters with wireless digital ("smart") meters in my neighborhood.

My reactions to microwave and UHF radiation include the following: I get jittery and my body buzzes. I have heart arrhythmia, fatigue, insomnia, headaches, back pain and chest pain. My muscles don't work very well. It feels like there are chaotic energy pulses moving around my body. Sometimes it's hard to think straight. On a really bad day, I feel like I'm going to jump out of my skin.

Exposure to microwave radiation, especially, makes me ill. If I get within a block of a cell tower, I get shaky and uncoordinated and must leave immediately.

Having smart meters in my neighborhood makes me ill enough. If a 5G cell transmitter were placed near my house, even a block away, it would be devastating for me. I would not be able to function properly or even think straight. We would have to move. But where would we move to? The proposal to implement 5G technology everywhere would mean that no place would be safe for me.

Wireless 5G technology would severely impact many people with various kinds of health problems. Surely, our welfare should be more important than profit and convenience! Please do not support the implementation of 5G until such time as a safer (wired) version is available.

Sincerely,

Ariel F. Barfield, Ph. D.
