My name is Judy Staab and I live in Phoenix, Arizona. My experience has been in both the industrial and professional business sectors, and since 1980 I have owned businesses. At a chemical packaging division of a well-known Fortune company, I set up the OSHA (Occupational Safety & Health Administration) program newly established nationwide within the industrial sector. I mention that because at 75, I have worked most of my life in a number of companies that were required to adhere to comprehensive safety standards. Never in my wildest dreams would I have believed our utility company would install an unsafe Smart Meter to our home without our knowledge or consent, designed to emit hazardous non-ionizing radiation up to 190,000 times per day throughout our home.

Arizona Public Service (APS) installed this unsafe Smart Meter to our house in 2008 which I had no knowledge of for five years, after which I had lost a great deal of my hair, experienced vertigo, severe muscle cramps, head-aches, head pain, ringing in the ears, nose bleeds, agitation, sleep disturbances, skin irritations, to name a few. I learned that these symptoms are part of "Microwave Sickness" which is a result of constant radiation exposure. I also learned after researching electro-sensitivity, that many people were experiencing similar symptoms. In spite of replacing the Smart Meter with a safe analog mechanical meter on our home in 2013, the five years of physical damage has resulted in my being hyper-sensitive to microwave radiation from cell towers, WiFi, cell phones, etc. In order to eliminate the effects of EMF/RF radiation, we were forced to make many changes in our home by eliminating WiFi and hardwiring our computer systems, returning to landline phones rather than wireless, eliminating a metal frame from our bed, installing window film with RF rated coatings (needed to block neighbors' Smart Meter radiation as each Smart Meter ranges a-2.1 mile radius), as well as numerous other changes. Additionally, I am forced to protect my upper body from dirty electricity by wearing

an RF blocking fabric while using my computer. When I drive by schools with cell towers in the sports fields, or in strip malls, shopping centers, parks, etc., I often experience sharp head pain. I wake up in the middle of the night when cell receptor towers receive data dumps from Smart Meters.

After researching 5G, I can't even imagine how quickly my health will deteriorate which is frightening, but more importantly, I can't imagine how our youth will survive nor anyone who's health is already compromised.

It is beyond me how **any** business entity, whether a public utility, a cell phone service provider, and especially government representatives who are responsible for assuring the public from harm due to decisions they make, would entertain this level of damaging technology. Furthermore, the safety studies that our government claims to have conducted are decades old and **do not** reflect the current standards accepted worldwide. The approval of 5G technology our government is considering will cause an epidemic scale of illness nationwide.

Since many government agencies, like OSHA, were implemented to assure citizens would not be harmed from industry's decisions, why then is this 5G ultra-high frequency platform being thrust on an unknowing public without any regard to safety?
