State: Arizona

Name: Warren Woodward

Occupation: I am Warren Woodward and I am retired. I am also Arizona's foremost anti-"smart" meter advocate and, as such, an intervener in the current Arizona Public Service electric utility rate case. Because of who I am, I get lots of calls and emails from people harmed by "smart" meters

Wireless Health Effects: Their symptoms are multiple, and among the most common are skin issues, insomnia, fatigue, ear ringing, and heart palpitations. These go away when the "smart" meter is removed.

The harm inflicted is real, not psychological. Search YouTube for my videos, EKG Proof That "Smart" Meters Affect the Human Heart, EKG Proof That "Smart" Meters Affect the Human Heart, Part II and Nerve Disrupting Frequencies Radiating from "Smart" Meters.

Shortly after "smart" meters were installed in Sedona in 2014, I got ringing in the ears, a common symptom of microwave sickness.

Concerns for 5G: 5G will exacerbate what "smart" meters and the overall unprecedented proliferation of wireless in general have started. It is absolute madness writ large. It is not "progress."

The only "good" thing about 5G is that, because of the aforementioned exacerbation, people will get sick in such numbers that even the most clueless among us will finally wake up to what the problem is.
