My name is Julie Levine. I have a Master's Degree in Social Work and have led non-profits, and worked with cities and counties to improve services and outcomes for low income children and families. I have also taught in social work schools in L.A. and NYC and was a field instructor at USC School of Social Work.

I became electromagnetically-sensitive from scramblers used by police during protests during Occupy LA, and my symptoms were exacerbated after electric "smart meters" were unrolled in my neighborhood. I am seriously disabled from electromagnetic frequencies. My symptoms include: Electric shake, vomiting, diarrhea, sleeplessness, hot flashes, loss of vision, irregular heartbeat, headaches. Plane travel is difficult, I can't spend more than a couple of minutes in environments where people are using cell phones as I get heart palpitations, headaches and nervousness. I am also bothered by smart meters, wi-fi and boosters. Due to my disability I have had to sell my home and I am living tucked in to a canyon on a mountain, and I sleep in a Faraday Cage because I am also disturbed my passing aircraft. I am on SSD for a traumatic brain injury which caused a broken blood brain barrier and has exacerbated my sensitivities. I would very much like to testify as there are few places left for people like me to live. We fought hard to prevent additional cell phone towers in our neighborhood, but 5G would lead to increased wireless signal and would be hell on earth for me and others like me. I tried to testify by phone at the CA Assembly hearings but was told that phone testimony was only being allowed for four individuals - two for and two against. I have nowhere to turn and am scared about what the future will hold if 5G goes through.
