CONFIDENTIAL

State: Colorado

Name: Joanne Estrada

Occupation: My name is Joanne Estrada. Currently doing Elder Care and some technical writing. Former Engineering Technician, Portrait Painter and Air Traffic Controller. I'm 66 years of age. I live in Superior, CO.

Wireless Health Effects: EMF/Wireless Technology has negatively affected my health. My symptoms include a burning sensation all over, skin rashes, hives, angioedema, sleep disturbance, irregular heartbeat, peripheral neuropathy, nerve pain, muscle spasms/cramps (especially feet and back) eyestrain and reduced vision, autoimmune disorder and brain fog.

Wireless technology has affected my life: EMF/Wireless Technology has negatively affected my life in all areas. It is difficult to spend time with friends and family, and so has caused isolation. I cannot go to events such as educational programs/courses, dining out, movies, concerts, parties, potlucks, etc. without suffering the consequences. I have to leave my home of 13 years, as the EMF's are so strong that I am confined to living in the bedroom. The only time that I'm not experiencing symptoms is when I'm hiking and/or tent camping in wilderness areas. I've not been able to work in my career field, and have had to pass up many work opportunities, which has negatively impacted my financial situation, which in turn has limited my ability to acquire safe housing. Lots of stress and uncertainty! Wireless Technology at current power levels and frequencies is an invasion of my living space, and my life.

Concerns for 5G: As for my concerns about the future, I shudder to think of the far reaching deleterious effects that the G5 rollout would have on our world! I'm especially concerned for our children; our next generation. They are being exposed to dangerous levels from before birth. It is totally unacceptable for G5 wireless technology to be rolled out without prior thorough studies of its biological effects. Animals and plants are also affected. The energy requirements for this technology is also of concern, as it contributes to climate change.

Sincerely,
Joanne Estrada
