CONFIDENTIAL

State: Connecticut

Name: Lynn Stevenson

Wireless Health Effects: My symptoms include, tremors, severe leg pain to the point where I collapse, visual dysfunctions, and sleep disturbance. The little I do sleep is in a chair because the level of EMFs in my bedroom is intolerable. I am *desperate* to find a place to live that is away from wireless radiation.

Wireless technology has affected my life: I am 80 years old. I've lived on the second floor of a 2 family house in New Haven for 30 years. I can't use a computer due to my electrosensitivity, and I am in desperate need for safe housing. My previous long-time, downstairs, neighbor was an elderly woman who did not use wireless devices. Recently a family has moved into the apartment below me and they have Wi-Fi, computers, and cell phones in use constantly. I have suffered severe adverse health effects. I am desperate to move, but am on low income Section 8, and have been unable to find a safe place to move. I ended up in the emergency room due to my severe reactions to the neighbor's Wireless devices, only to suffer further adverse effects from all the Wireless radiation in the hospital. Wireless technologies in hospitals and doctor's offices have made it very difficult for those with severe ES to receive medical care. Public buildings, restaurants, libraries, schools, grocery stores etc. have become inaccessible to me and to thousands of others with sensitivity to Wireless radiation.

Concerns for 5G: I would like to voice my strong objection to the placement of 5G antennas near homes.

Lynn Stevenson
