State: Florida

Name: Jamie Lehman

Occupation: Property Manager

Wireless Health Effects: I became 100% electro hypersensitive after FPL installed a "smart" meter on my house. At 49 years old I got to the point that I had difficulty walking and talking. My husband and I both were "buzzing" from head to toe. My husband suddenly had horrific bilateral hip pain. I was getting heat shocks in my house. My brain was foggy and my speech became slurred. I was 100% disabled for about six months, until I took a therapy that seemed to repolarize my brain. It was difficult to concentrate on anything. I could no longer tolerate even the energy from a single light bulb being turned on in the house. It has taken me several years to work my way back to good health.

Wireless technology has affected my life: I still have some sensitivity to wireless and am aware of the new 5G technology installed to protect our local port and power plant in Riviera Beach. The energy locks onto any given organ or part of my body as I drive through the stretch with the new technology. I still am cautious about spending too much time at certain properties that are near antennae, towers, "smart" meters, WiFi, etc. I experience strange sensation, confusion, brain fog around newer cell phones, the stronger ones.

From my medical doctor: "April 16, 2013, I have evaluated Ms. Lehman today. In my professional opinion, she suffers from severe sensitivity to electromagnetic frequency and radio frequency, such as cell phones, smart meters, cell towers, and Wi-Fi. The clinical manifestations are severe central nervous system problems and lymphadenopathy. She should avoid any exposure to electromagnetic frequency and radio-frequency in her environment." Hanoch Talmor, M.D. 4140-C NW 27th Lane, Gainesville, FL 32606 (352) 377-0015.

Concerns for 5G: I am concerned about the known and unknown effects of 5G as they already know that if affects the skin and eyes. I do not believe they have performed adequate testing on people with infections, metal in their bodies, medical device attachments, pregnant women, children and seniors.
