State: Florida
Name: Shirley Joy Denton Jackson
Occupation: Career with School District of Palm Beach County, FL - included Research Project Manager, Staff Development Specialist/Teacher Trainer, Dept of Safe Schools Coordinator, District Grant Writer

Wireless Health Effects: Forced to quit career because of seemingly random episodes of detrimental cognitive and physical effects. Tipping point for career loss and what told me symptoms MUST BE environmental: after lunch taken in a particular school cafeteria, was able to hear words spoken to me but not able to understand what the words meant. VERY disconcerting for self and others. Took 2 years to research & devise experiment to discover cause. Most U.S. physicians unaware, just offer potent drugs, both ineffective and fraught with side-effects/high cost!

SYMPTOMS & RESILIENCE - VARY GREATLY W/EXPOSURE TYPE-TIME-INTENSITY, CRUCIAL MANDATORY KNOWLEDGE (RIGHT TO KNOW) SO I CAN MINIMIZE EXPOSURES & HEALTH EFFECTS! WHEN AT ITS WORSE:
> sharp stabbing head-pains, skin irritated like intense sunburn, tongue tremors and loss of bowel control;
> disequilibrium, aching joints; nose and gum bleeds;
> language impairments, halting graveled voice or inability to speak, cognitive/executive control fogged, uncharacteristic quick-escalating behavioral reactivity.

Wireless technology has affected my life*:* ECONOMIC – Loss of work, career & salary; 20% cut in retirement benefits, loss of rental property income – had to sell, because the bank of smart meters cause bleeding gums.

SEVERLY CURTAILED: CIVIC ACCESS (libraries, schools & parks, public meetings on issues), FAMILY-SOCIAL, FAITH-WORSHIP, PUBLIC (now even personal car) TRAVEL.

Concerns for 5G: Just as with other wireless transmissions, potential high value but totally unevaluated deployment impacts on health. Why race first to jump off a cliff? NOT FULLY TESTED on HUMANS! NO AGENCY Accountable for Human Safety and disregard for research-based epidermal effects unconscionable. Guidelines incredibly inadequate. We could be world leaders if we took safety-innovation seriously. Wholesale deployment without TRUE biological safety pre-checks puts all of us at risk, especially children !!!!! and others with vulnerabilities and chronic diseases that are now exploding into a vast national health crisis.
