7/12/17

To Whom It May Concern:

I have been blessed to have opportunities to work in many service jobs since 1972. I had a 30 year career at the telephone company, have been involved in several home based businesses, 4 years of banking, 4 years of retail. I am currently employed as a cashier at my local Walmart since April of last year.

Wireless technology has affected my health in catastrophic ways. I heard the frequencies from the Smart Grid electric grid making their way up the electric distribution lines toward and past my property. After the wireless AMI meter (Smart Meter) was installed the nauseous pure tone noise pollution invaded my house. Even with the electric turned off at the breaker box to the entire house the infrasound continues unchanged as that is coming directly from the distribution lines and passes through everything but a faraday cage. The meter itself is pumping dangerous frequencies through the entire house wiring.

I have suffered a plethora of symptoms from my microwave radiation exposure: extreme fatigue, inability to sleep, sleep interruption, vibrations in my body including my brain, continuous white noise in my ears, vertigo, fainting spells, heart palpations, nausea, high blood pressure, nose bleeds, memory loss, disorientation, inability to complete simple tasks, depression, isolation, dread, eye floaters, piercing pain in my ears, headaches and more.

I hear the horrible Infrasound pure tone noise pollution everywhere I go but my own home is the worst I have ever been exposed to. I am in rural Western Kentucky. The electric distribution line that serves me crosses the back of my property to the next where it turns and comes back again. It seems to have the effect of a tuning fork where it makes the turn. The horrible sound drones on 24/7/52. The wireless meter was installed by deception. The utility refused to remove it despite my health complaints so my complaints were filed with the Kentucky Public Utility Commission. To prove what I hear is auditory I purchased a Zoom H5 recorder and captured 2 separate samples 6 months apart. My acoustic engineer graphed the harmonics proving the sound is occurring in 11 pulses per five seconds. That is 190,080 times a day. I am including a DVD of the sound 4x the speed so you can hear it. Headsets are recommended. In preparing for my case I had a Power Quality study done and Kenergy got very bad marks. Despite all the evidence I presented even including an EHS diagnosis from a doctor familiar with the effects the board declared everything "moot" and dismissed my case without a hearing. See case #2016-00187. Already being exposed to Wi-Fi and cellular this additional exposure surpassed my body's ability to bear. I found myself isolated by the inability of others to hear or feel the effects. To try to get some relief I returned to work from retirement but will not be able to master my regular customer service position due to my loss of mental capacity.
I know it may seem insignificant to some but my 20 year old bush closest to the meter which died immediately after installation and just within the last month 2 of my trees came down over the electric wires at the street. This effects all biological life. I have spent a small fortune on gadgets, stones and nutrition to try to improve until people realize how dangerous and destructive this technology is. Please help us.

Sincerely, Nancy A Stadtlander
