State: Kansas

Name: Jami Riehm

Occupation: I work as a Care Provider for disabled people at a place called Cottonwood, Inc.

Wireless Health Effects: I moved to Lawrence, Kansas not knowing that the city was the first in Kansas to be covered with Smart Meters. I didn't know what a Smart Meter was and wasn't given any information upon moving into my apartment that they were on the apartment complex. I started having problems of not feeling well and this was not normal for me at this time in my life. So this started my search for what was making me feel this way. I realized I felt worse while in my apartment and so I narrowed it down to what could be affecting me inside my apartment? I found it wasn't Carbon Monoxide, Radon Gas, fumes, carpeting, etc. so what was it? I finally found out about the Smart Meters and researched on them and decided to test to see if those (living in an apartment means you may have many Smart Meters close by) were the problem. I called, searched for info and even had the electrical company come and check the radiation levels in my home. The electrical company (Westar) let me know everything checked out o.k. Well I was still feeling bad and especially during the evenings and nights. It got so bad at times I would have to leave my home since I couldn't bear it. My bedroom wasn't far from the bank of Smart Meters on my apartment complex. One night as I was trying to sleep in my apartment it felt like I was being hit by a machine gun fire of radiation. I could sense the bursts and they were hitting me at the speed of a machine gun firing. I couldn't stand it and that may have been my last night sleeping in my apartment and I became homeless at nights in a way and having to sleep elsewhere.

I knew there was a definite problem and so after research on Smart Meters I narrowed it down to knowing I was being bombarded with wireless radiation called Electromagnetic Radiation and also dirty electricity (Smart Meters cause dirty electricity also since they aren't grounded). People and Doctors didn't believe me much and so what do you do? I decided to keep researching and I bought a radiation meter to test my house myself. Well my meter showed I did have radiation and dirty electricity. I learned that certain appliances caused it to be worse like my refrigerator, which I would have to unplug at times because it bothered me so much. I would try to remember to plug it back in when leaving to save my food. I learned that I was electrosensitive and so now a captive to the Electric Company and the Kansas Corporation Commission who both did not help with me getting the needed relief I was desperately needing.

My brain, eyes, and hands, are mainly what bother me when around a lot of wireless. It's more than brain fog but it's a sensation I get in my brain that is uncomfortable and when bad it is so controlling of my life since it's hard to accomplish other things except trying to find relief. Relief comes to me by removing myself from the area of heavy wireless or using wireless protection items such as a Faraday Covering that I have used when sleeping in Lawrence or anywhere I'm bothered by wireless (it's a material of silver threads that if draped over a bed or anywhere to block out a lot of the wireless radiation). My eyes can get a dry feeling to the point where I have to stop what I'm doing and get away from the wireless source and using eye drops help. My hands are bothered if holding anything with wireless radiation going through it, such as a phone. I try not to hold a phone long in a single hand and sometimes put it down so it's not touching my hands at all. I try to use mainly just the speakerphone when talking on wireless phones and I don't like talking long on them. I have Ethernet hook ups in my home except for my cell phone which I try to not keep near my body.

Wireless technology has affected my life*:* I became homeless in a sense and was stuck in an apartment lease, which after much trouble and expense finally got free from and I was overjoyed to flee to another city that didn't have Smart Meters (yet). That City decided to get Smart Meters and so I moved again to another City that doesn't have Smart Meters but what am I to do if all of Kansas gets covered as planned by the U.S. Government? This was all so hard to go through - draining my time, money, and energy and feeling bad at times through it all. There is also a simple solution to people who can't live with Smart Meters and it's to allow them to have an analog meter again. This was unconstitutional to force a product on me that was making me sick and not allowing me to remove it since there was a good alternative. This Nation is crazy at times and changes are needed desperately. Wireless radiation no matter where it's coming from (Smart Meters, routers, phones, etc.) is dangerous to all living beings.

Concerns about the future: The home I purchased now in a smaller town doesn't have a Smart Meter and my radiation meter checks my home out as o.k. for me (lots of green readings on my meter). I hope this town will not allow a Smart Meter or 5G rollout. The new 5G wireless plans would be absolutely devastating to health just like the Smart Meter roll out is. To explain: All people are affected by wireless. What saves people from more health problems is when they move around and then are in areas of less wireless their damaged cells (from being in constant wireless) begin to heal and can heal to normal again, if the person stays in a no wireless area for long enough. The problem with Smart Meters and 5G is it covers a lot of areas so there are not as many relief areas for the body's cells to recover. When cells aren't given time to recover at some point, they become sick and the person becomes sick and the bad cells can bring harm or death.

Please listen to us and to all the experts on Electromagnetic Radiation and Dirty Electricity. Please help us and stop this covering of our nation with this danger. Please don't let money be what influences you but a desire to do the right thing for this Nation. Filling the Nation with dangerous wireless with no areas to find relief needs to be stopped before we become a sick Nation. Wireless Radiation is not just the new smoking but is the new smoking on steroids.
