State: Florida

Name: Alexandra S. Ansell

Occupation: Medical Transcriptionist

Wireless Health Effects: Headaches (migraines), insomnia, heart palpitations, itching, extreme fatigue. I was chemically sensitive and then an occupational exposure To strong electromagnetic field at the MRI center sensitized me to EMF/RF. I am now unable to tolerate both EMF and RF.

Wireless technology has affected my life*:* I altered my life (now work at home in shielded environment with no wireless technology). I use filers on outlest and a shielded cable supplies phone internet, TV etc.

Concerns for 5G: 5G is a huge concern (being absorbed directly through the sweat glands) causing me to debate and investigate leaving the county for a cleaner, lower RF/EMF environment. I can't imagine living in 5G where we will not even be able to measure our exposure level. I find the prospect of 5G devastating.
