RE: 5G Bill

I have an auto-immune medical condition that has damaged my central nervous system and has made me reactive to RF (radio-frequency). In recent years since radiation levels have elevated, I've experienced chronic inflammation. After visiting specialists across the US, including the Mayo Clinic, I was diagnosed as Electro Sensitive. There is no cure for this once the body's cells have bene damaged in this way. I've discovered that avoidance is the only solution.

My current primary MD and Allergist advised me to move to a rural area where I would be the furthest from cell towers. I moved several thousand miles to escape city life in CA and be closer to family in Michigan. After much expense and sacrifice, I have achieved a "safe space" in my home, here is Roscommon, which has allowed me to live relatively pain-free.

You cannot imagine how I feel with the threat of having mini cell towers (from the new 5G) invading my town and then placed right on my street. Beside the pain and discomfort exposure to RF causes, it puts me at a greater risk for cancer as my lymph nodes are now inflamed and my blood cells have been altered. Due to this, my doctor has advised me to avoid public buildings and populated areas at all cost. My home is my only refuge.

Please consider the health and well being of myself and many others like me who will be immediately affected by the 5G infrastructure.

Thank you,
