State: Maryland

Name: Dina Lopez

Occupation: I am a highly qualified Civil Designer with experience in preparing residential and commercial engineering projects, such as sight plans, landscape, highways, tunnels, geotechnical, pipelines, flood control projects, and water and sewage control systems using AutoCAD.

Wireless Health Effects: Before August 28, 2016, I was a very healthy active woman. On August 28, 2016 I moved into a sub-division with townhouses where each home had a "smart meter" for electricity, natural gas and I believe water. At the time I moved into this home I did not know what a smart meter was.

Five day after moving in, I started feeling a horrible metallic taste in my mouth then my nose started bleeding and I was vomiting, my heart was pounding so fast, it felt like it was coming out of my chest, my whole body felt poisoned. I had stomach pain, ovary pain; my vision changed for the worse; I had constant ringing in my ears, dizziness, vertigo, depression, brain fog, migraines; I could not concentrate anymore; I had memory loss; it felt like my organs were being crushed. I went from being a very healthy woman to a very sick one.

Alarmed at how sick I was suddenly feeling I asked a doctor friend, what could cause this horrible feeling. He asked me if there was a smart meter in the house. He walked me through what they were sent me pictures of them and sure enough every house had them. He told me to get out of that place immediately because the EMF radiation these meters emit is unbelievable, and could make me very sick.

Wireless technology has affected my life*:* In panic I left that house and had to stay in a tent at a state park. I do not have family in the area and quitting my job is not an option, so I lived in this tent for 14 days meanwhile desperately looking for a place to live, with no smart meters. I've had to move 4 times since I became electromagnetic sensitive. I was finally able to find an older apartment building that does not have them. I am not able to socialize for fear of people's cell phones.

To make things short, this saga has ruined my life financially, physically and emotionally. I feel sick all the time; my body is not the same as it was about a month ago. Unfortunately, I work in front of a computer 40 hours a week, and I cannot quit my job. I am the sole provider for my sick mother and me.

About a month ago a new cell tower was placed less than a 1/4-mile from my work. I am about to lose my job due to this new cell tower. I know the exact time, they are testing the tower, which I think is around 2:30 pm, and I have to leave my work immediately. I have lost thousands of dollars because of this disease and the list goes on. This town is set on turning on 5G any time now.

Concerns about the future: What future? I have no future, the only future I think of is to move to a very remote area and maybe find some sort of peace. I think the WIRELESS INDUSTRY will cause the end of humanity, if nothing gets done to stop it.
