March 2018

My name is Sandra Anderson and I live in Lincoln, Nebraska. I own my home and have lived at the same residence for 22 years.

I am retired from the insurance business for 13 years and now primarily work with my Animal Welfare Organization.

For many years I worked in the health and fitness industry also as a fitness director and instructor of various Fitness classes. I have never had any medical issues to speak of as I have never smoked, drank, taken recreational or prescription drugs and have lived an extremely clean and healthful life with regular exercise and good, deep restorative sleep.

Approximately 2 years ago the electric company installed a smart meter on our home. Within a few weeks I began having severe muscle spasms, numbness in my lower legs and feet and a spasticity that made it difficult to walk. I now am forced to stumble around all day with a cane and a brace with no relief in sight.

In addition, my balance became impaired almost overnight. I also noticed decreasing ability to focus on tasks and frequent brain fog. Lesser symptoms include intense thirst, decreased appetite, and extreme dry mouth when sleeping. These symptoms have altered my life tremendously and now we are being forced to pay money we don't have to Shield ourselves from these microwaves. Even our dogs began displaying symptoms of microwave illness with rashes, tumors and ear pain.

Nowadays I find it almost impossible to focus on and complete tasks. My life has become extremely stressful as a result of being forced to live under attack 24/7.

As an experiment my husband and I decided to take a trip to an area where there were no towers or wi-fi. Almost immediately our symptoms disappeared. Upon returning home they all eventually returned.

I urge, no I do not urge you, I BEG you to stop this assault on all living things. We have lived without 5g speed for thousands of years and we can continue to live without it now. Please, do the right thing!
