To whom it may concern,

I am the unwitting victim of radiation poisoning from a smart meter, installed in my home, without our permission back in 2010 by Suffolk County Water Authority. I nearly killed me. If my husband hadn't found the smart meter, manufactured by "Itron", in our basement, in 2013, I would be dead.

There is no way humanity will survive the onslaught of all this wireless. Cellphones are bad enough, smart meters are killing us and 5G will destroy the world, all its animals, trees, plants and babies.

I was a perfectly healthy and vibrant mother of three amazing children. Suddenly and without warning, I started to feel my life slipping away. I was getting horrific heart palpitations, uncontrollable, shortness of breath; waking up to heaving in the middle of the night. I had body pain over my entire body, from my toes all the way to my head, terrible, non-stop headaches. I had brain fog so bad, I couldn't think straight or drive my car. My sense of direction was gone.

I was being electrocuted from the inside out, like I was being microwaved. I couldn't sleep at all and I was having terrible anxiety and food allergies, along with chemical sensitivities were cropping up, out of the blue. It was only when my husband found the device and removed it himself, that my symptoms started to dissipate. But I told him I wanted to die before that.

I am now slowly regaining some of myself back, but I cannot work anymore, as I am permanently now sensitive to all things wireless. This has pretty much destroyed my life. I can't visit my kids at their colleges or stay in hotels or fly in airplanes. My life was stolen and I can't even collect disability, as the U.S. has not recognized this illness as of yet, although many other countries have and are helping their citizens, we here in the states are backwards and going ahead with the installation of lethal pulsed radiating and wireless technology.

This must be stopped. I am urging you all to listen to me, I am but just one canary in this coal mine and this is not going to bode well for anyone, especially the young and the elderly, but all are on the firing lines with 5G, it is not something to take lightly; this is a massive experiment and genocide will be the outcome.
It must not go forward, we need all legislators on board to stop the mayhem and roll out of 5G.

The industry is going to make trillions, while people perish in huge numbers and doctors will be of no help whatsoever, as they don't recognize the dangers or symptoms emanating from wireless technology.

Please feel free to contact me, with questions. I speak out locally and warn those who are getting sick to look at their homes for smart meters and have them removed.

WE the People are in harm's way and big business does not care.

Sincerely, Susan Burke
