***State:*** New Mexico/California

***Name:*** Craig Barth

***Occupation:*** My name is Craig F. Barth. Before being disabled by Electromagnetic Sensitivity in 2000, I lived in Monterey, California where I was Vice President and Editor-in-Chief of Brooks/Cole Publishing Company, a division of The Thomson Corporation. I have a B.A. in Philosophy from Earlham College and graduate work at The University of Chicago. I was a member of the Advisory Board of Penn State University's World Campus...and active in The Church of the Wayfarer, a Methodist church in Carmel, California.

***Wireless Health Effects:*** When exposed to wireless technology (cell phones, cell phone antenna, cordless telephones, and microwave antenna) my initial symptoms are peripheral neuropathy (pain and numbness) in my left arm and left leg, inability to concentrate, and dizziness. With prolonged exposure, my symptoms advance to rapid heartbeat, acute pain in my shoulder and neck, inability to maintain balance, and ultimately to the sensation of pressure on my brain which feels much like it does when one swims to a depth exceeding 15 feet. Ultimately, if exposure to wireless technology is allowed to go beyond this level, the brain pain becomes extreme and intolerable. I have lost consciousness from a prolonged exposure to wireless radiation.

***Wireless technology has affected my life:*** With the sudden onset of my acute sensitivity to Wireless radiation, I was unable to continue my work, and ultimately had to evacuate Monterey, California. I resettled to a fairly remote Indian Reservation in north central New Mexico. Obviously, I cannot use a wireless system for connecting to the internet...and due to sensitivity to other forms of EMFs I cannot use my computer for more than 45 minutes daily. I am unable to stay in 90% of all hotel rooms, due to their installation of "Wi-Fi" routers in their hallways. I must carry an RF Meter with me always and use it to check out any new indoor (and outdoor) environments I wish to inhabit. I am unable to go to most in-patient wards in hospitals since their recent switch to "Wi-Fi" networked monitors in their hospital rooms. The radical restrictions imposed on me by this acute sensitivity cost me all this, but also my 22- year old marriage. We were divorced in 2002.

***Concerns for 5G***: Several years ago, I visited a friend in Plano, Texas. You will know that Plano installed city-wide high powered "Wi-Fi" in 2011 or 2012. Each street has high-powered Wi-Fi antennae installed in all neighborhoods atop telephone poles and street lamps. After less than an hour in my friend's house, I had to beat a hasty retreat out of town when I began to experience my early and mid-level symptoms (see #2 above). 5G scares the heck out of me since it is much more powerful that any system Plano installed. Will I have to retreat even further into the wilderness to survive? My other medical conditions require me to access doctors: will I be able to tolerate visiting their offices once 5G is installed? How will I shop, much less travel, once 5G is installed nationwide?

Craig F. Barth, 6566 Sahchu Street, Cochiti Lake, New Mexico 87083

I give permission to use my Testimony for advocacy purposes regarding wireless radiation issues.
