

To whom it may concern,

I wish to ad my testimony regarding 5g installation. There haven't been enough studies regarding the safety of Wi-Fi and its effect on the human CNS system.

I recently moved from a very rural area into a populated area that is inundated with radio frequency waves...

I have since suffered severe memory loss, Tremors, headaches, CNS issues, tinnitus, muscle cramping, vertigo etc....all sudden on-set...

I would seriously implore you to do double blind, independent study of 5g prior to subjecting the population to any more damage.

Sincerely Cindy Tiller
