

State: Ohio

Name: Gary Lawson

Occupation: Machinist - President of Lawson Precision Machining, Inc. in Ohio

Wireless Health Effects: Wireless technology causes me to have headaches, migraines, chest pains, tension, concentration problems, tinnitus, insomnia and fatigue.

Wireless technology has affected my life: I have had to eliminate all wireless devices from my home. I cannot go out into public without it causing headache, as wireless technology is everywhere. It is even difficult to be around family and friends because cell phones have become inseparable from most people and "free wi-fi" is available at most public places.

Concerns for 5G: I am concerned that as new devices arrive that operate at higher frequencies and/or are more powerful, the symptoms I experience will only become worse, and my home will no longer be a safe place for me.
